

# INNOVATIONS 2012

**POTTINGER**

JUMBO combiline cover plus  
Load cover system

JUMBO 7210 combine cover plus

# COVER PLUS

## Load cover system – cover plus

### Advantages

#### Load cover system

- Completely covers loading chamber, even if filled above 4 m
- Automatic opening and closing of cover, activated from tractor cab
- Operated using Power Control

Forward-thinking engineers at Pöttinger have developed a load cover system for the JUMBO combine.

This keeps harvested material in place, especially lightweight chopped material, so that nothing is lost during road transport. This feature is especially interesting for biogas plants. Pöttinger has already covered possible future legal issues here, as legislators are already discussing possible legal requirements for the safe containment of agricultural materials in transport. The load cover system is currently available for loader wagon models JUMBO 7210 L combine and 10010 L combine, with availability for all other JUMBO combine models next year.

The control of the load cover system is conveniently integrated into the Power Control system. This solution, which has been developed especially for loader wagons, also features a hydraulic interlock that eliminates operator errors and enables high speed safe journeys.

With these new developments in the loader wagon sector the world leader yet again proves its pioneering role as the No. 1 worldwide.
