(Type PSM 366 : + . . 01266)

  
Ihre / Your / Votre • Masch.Nr. • Fgst.Ident.Nr.

## **Sehr geehrter Landwirt!**

**D** Sie haben eine gute Wahl getroffen, wir freuen uns darüber und gratulieren Ihnen zur Entscheidung für Pöttinger und Landsberg. Als Ihr Landtechnischer Partner bieten wir Ihnen Qualität und Leistung, verbunden mit sicherem Service.

Um die Einsatzbedingungen unserer Landmaschinen abzuschätzen und diese Erfordernisse immer wieder bei der Entwicklung neuer Geräte berücksichtigen zu können, bitten wir Sie um einige Angaben.

Außerdem ist es uns damit auch möglich, Sie gezielt über neue Entwicklungen zu informieren.

## **Produkthaftung, Informationspflicht**

Die Produkthaftpflicht verpflichtet Hersteller und Händler beim Verkauf von Geräten die Betriebsanleitung zu übergeben und den Kunden an der Maschine unter Hinweis auf die Bedienungs-, Sicherheits- und Wartungsvorschriften einzuschulen. Für den Nachweis, daß die Maschine und die Betriebsanleitung ordnungsgemäß übergeben worden ist, ist eine Bestätigung notwendig.

Zu diesem Zweck ist das

- **Dokument A** unterschrieben an die Firma Pöttinger einzusenden (falls es sich um ein Landsberg-Gerät handelt an die Firma Landsberg).
- **Dokument B** bleibt beim Fachbetrieb, welcher die Maschine übergibt.
- **Dokument C** erhält der Kunde.

Im Sinne des Produkthaftungsgesetzes ist jeder Landwirt Unternehmer.

Ein Sachschaden im Sinne des Produkthaftungsgesetzes ist ein Schaden, der durch eine Maschine entsteht, nicht aber an dieser entsteht; für die Haftung ist ein Selbstbehalt vorgesehen (Euro 500,-).

Unternehmerische Sachschäden im Sinne des Produkthaftungsgesetzes sind von der Haftung ausgeschlossen.

**Achtung!** Auch bei späterer Weitergabe der Maschine durch den Kunden muß die Betriebsanleitung mitgegeben werden und der Übernehmer der Maschine muß unter Hinweis auf die genannten Vorschriften eingeschult werden.

## **Cher agriculteur!**

**F** Vous avez fait un bon choix, nous nous en réjouissons et nous voulons vous féliciter de votre décision pour Pöttinger. En tant que votre partenaire, nous vous offrons de la qualité et des performances, en relation avec une service après vente sûr.

Afin de mieux apprécier les conditions dans lesquelles nos machines vont travailler et pour que ces exigences puissent influencer la construction de nouvelles machines, nous nous permettons de vous demander quelques renseignements. De plus il nous sera possible de pouvoir vous informer d'une manière plus précise des nouveaux produits.

## **Responsabilité envers les produits. Obligation d'informer.**

La législation concernant les produits oblige le constructeur et le concessionnaire, au moment de la vente, à donner au client le livret d'entretien ainsi que les indications concernant l'utilisation, la sécurité et les consignes d'entretien. Comme preuve que la machine et que le manuel ont été correctement remis à l'acheteur, il est nécessaire de le certifier.

Pour cette raison,

- **le document A**, signé, est à renvoyer à la société Pöttinger
- **Le document B** revient au concessionnaire et
- **le document C** appartient au client.

Conformément à la loi sur la responsabilité produit, chaque agriculteur est entrepreneur. Suivant la loi sur la responsabilité produit, un dégât matériel est un dégât causé par une machine et non sur la machine ; une franchise est prévue pour la responsabilité (EURO 500,-)

Les dégâts matériels d'entreprise dans le sens de la loi sur la responsabilité produit sont exclus de la responsabilité.

**Attention!** Lors de la revente de la machine plus tard, le manuel doit suivre la machine!

## **Dear Farmer**

**GB** You have just made an excellent choice. Naturally we are very happy and wish to congratulate you for having chosen Pöttinger. As your agricultural partner, we offer you quality and efficiency combined with reliable servicing.

In order to assess the spare-parts demand for our agricultural machines and to take these demands into consideration when developing new machines, we would ask you to provide us with some details. Furthermore, we will also be able to inform you of new developments.

## **Important information concerning Product Liability.**

According to the laws governing product liability, the manufacturer and dealer are obliged to hand the operating manual to the customer at the time of sale, and to instruct them in the recommended operating, safety, and maintenance regulations. Confirmation is necessary to prove that the machine and operating manual have been handed over accordingly.

For this purpose,

- **document A** is to be signed and sent to Pöttinger,
- **document B** remains with the dealer supplying the machine, and
- the customer receives **document C**.

In accordance with the laws of product liability, every farmer is an entrepreneur.

According to the laws of product liability, property damage is damage caused by a machine and not to it. An excess of Euro 500 is provided for such a liability.

In accordance with the laws of product liability, entrepreneurial property damages are excluded from the liability.

**Attention!** Should the customer resell the machine at a later date, the operating manual must be given to the new owner who must then be instructed in the recommended regulations referred to herein.

© INSTRUCTIONS FOR  
PRODUCT DELIVERY

Dokument D

ALOIS PÖTTINGER Maschinenfabrik GmbH  
A-4710 Grieskirchen  
Tel. (07248) 600 -0  
Telefax (07248) 600-511  
GEBR. PÖTTINGER GMBH

Telefax (0 81 91) 92 99-188

GEBR. PÖTTINGER GMBH  
Servicezentrum  
D-86899 Landsberg/Lech, Spöttinger-Straße 24  
Telefon (0 81 91) 92 99-130 / 231  
Telefax (0 81 91) 59 656

According to the product liability please check the above mentioned items.

Please check.

- Machine checked according to delivery note. All attached parts removed. All safety equipment, drive shaft and operating devices at hand.
- Operation and maintenance of machine and/or implement according to operating instructions explained to the customer.
- Tyres checked re. correct pressure.
- Wheel nuts checked re. tightness.
- Drive shaft cut to correct lenght.
- Correct power-take-off speed indicated.
- Fitting to tractor carried out: to three-point linkage
- Trial run carried out and no defects found.
- Functions explained during trial run.
- Pivoting in transporting and operating position explained.
- Information given re. optional extras.
- Absolute need to read the operating manual indicated.

In order to prove that the machine and the operating manual have been properly delivered, a confirmation is necessary.  
For this purpose please do the following:

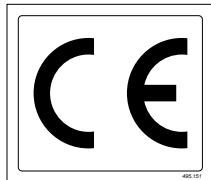

- sign the **document A** and send it to the company Pöttinger  
(in case of Landsberg equipment: to the company Landsberg)
- **document B** stays with the specialist factory delivering the machine.  
**document C** stays with the customer.

Observe safety hints in supplement-A

**CE sign**

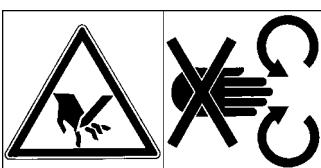

The CE sign, which is affixed by the manufacturer, indicates outwardly that this machine conforms to the engineering guideline regulations and the other relevant EU guidelines.

**EU Declaration of Conformity (see supplement)**

By signing the EU Declaration of Conformity, the manufacturer declares that the machine being brought into service complies with all relevant safety and health requirements.

**Meaning of warning signs**

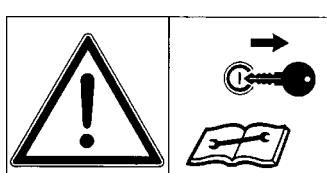

Danger - flying objects; keep safe distance from the machine as long as the engine is running.

Danger - stay clear of rotating machine parts

Stay clear of mower knife area as long as tractor engine is running with PTO connected.

Shut off engine and remove key before performing maintenance or repair work.

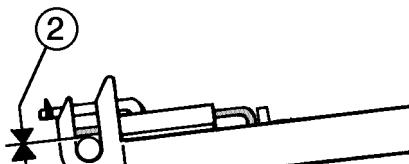

Stay clear of swinging area of implements

Close both side protective coverings before engaging p.t.o..

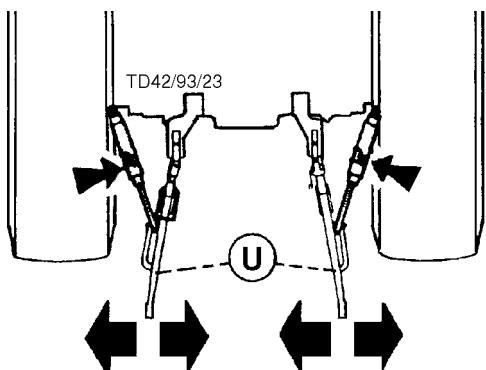

## Attaching in general

1. Observe safety tips in supplement A.
  - Please take note of comments in chapter "Custom-built Attaching" also.
2. Mark off the implement at the tractor's three-point linkage.
  - Secure locking bolts with linch pins.
  - Lock lower link bolts (2) so that they are free from play.

TD28/91/26

3. Fasten lower hydraulic link (U) so that implement cannot swing out sideways.

4. Connect hydraulic lines (Hyd) to plug-in coupling using double acting servo-valve.

## Setting gap "A"

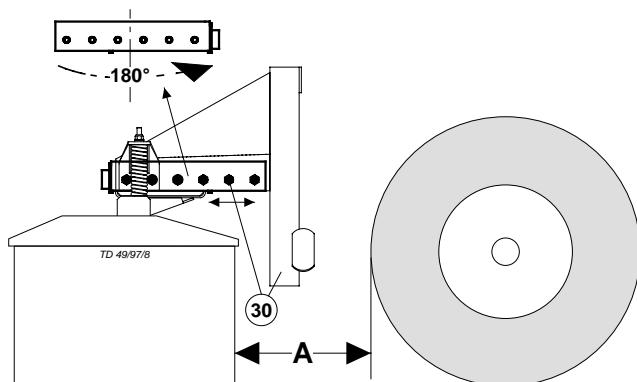

Refers to mower units without conditioner and swathe discs.

- Mount attachment frame (30) in the relevant position.

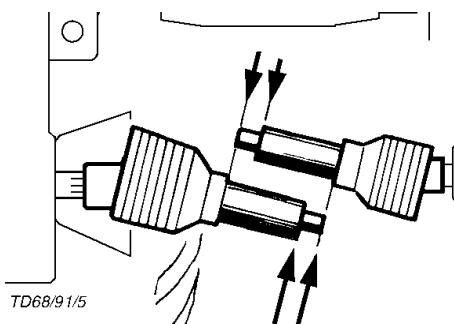

### *When the setting range is insufficient*

- Remove console
- Turn 180° and refit.

With this, gap "A" can be reduced 70 mm.

## Drive shaft

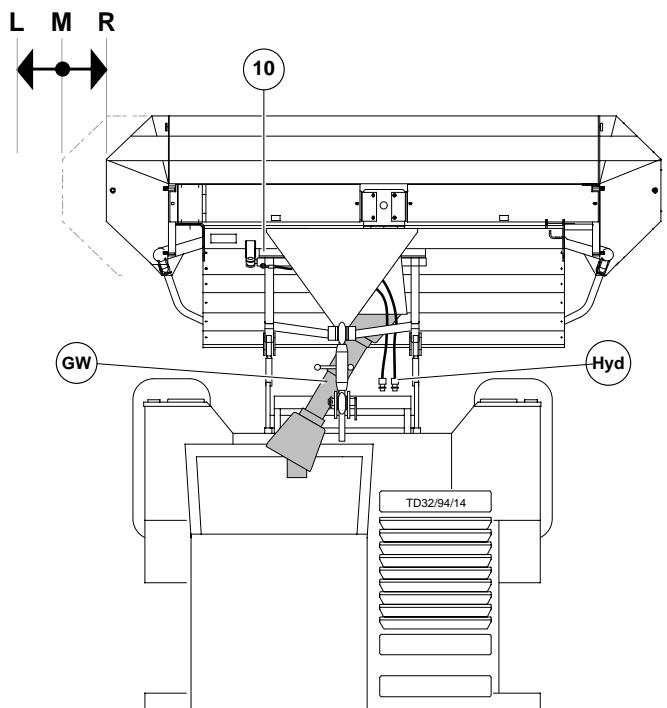

- Before operating for the first time, drive shaft is to be checked and adapted if necessary. See also chapter "Fitting the drive shaft" in supplement B.

**Important!**  
The mower bar can be moved left (L) or right (R) using the hydraulic cylinder (10). This shifting must be taken into account when shortening the drive shaft (GW).

M = Central Position.

## Road Transport

- Observe the regulations issued by your country's legislative body.
- Travelling on public roads may only be undertaken as is described in the chapter "Transporting Position".
- Fasten lower hydraulic link (U) so that implement cannot swing out sideways.

## Custom-built Attaching

Aebi  
Carraro  
De Pietri  
Nußmüller Rasant  
Reform Metrac

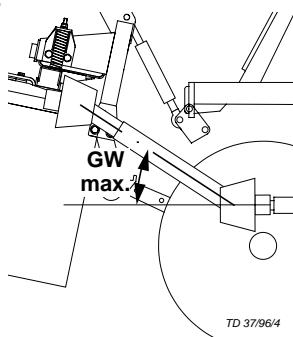

Because of differing types of lifting gears on various tractor models, special attaching kits are to be used.

- See Spare Parts list also.
- See supplement-D

## Maximum drive shaft angle

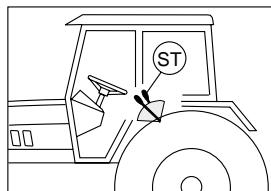

Most drive shafts may only be angled up to a **maximum of 25°** when in continuous operation (GW max.)

- Observe the advice in the drive shaft manufacturer's operating manual.

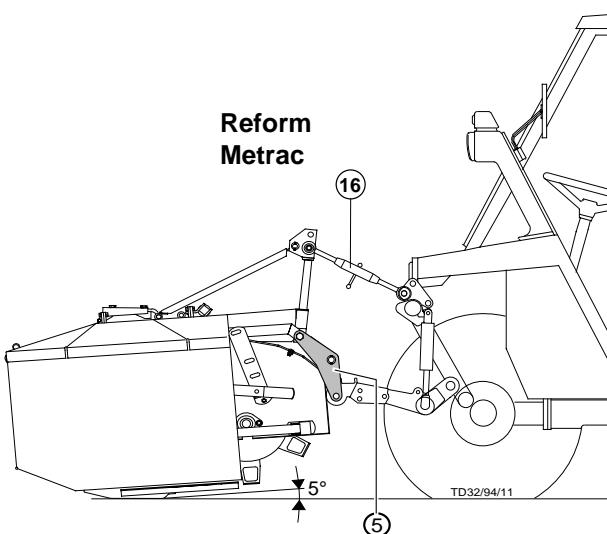

### In order to prevent damage

- Limit the lifting height with lever (ST)

**Reform Metrac**

## Transport position

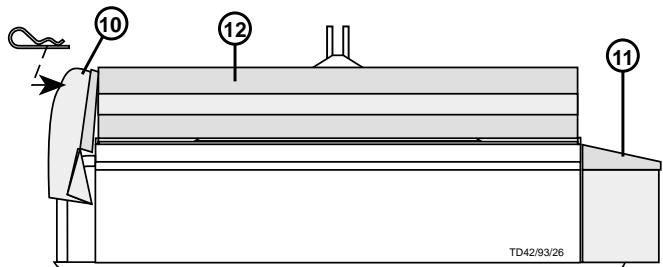

### Safety Precaution!

see supplement-A1 points 7.), 8c. - 8h.)

**Changing from working position to transport position is only to be carried out on even, firm ground.**

**Never let the mowing mechanism run with the mower raised.**

When transporting, side guard plates (10 and 11) can be raised and secured to reduce width.

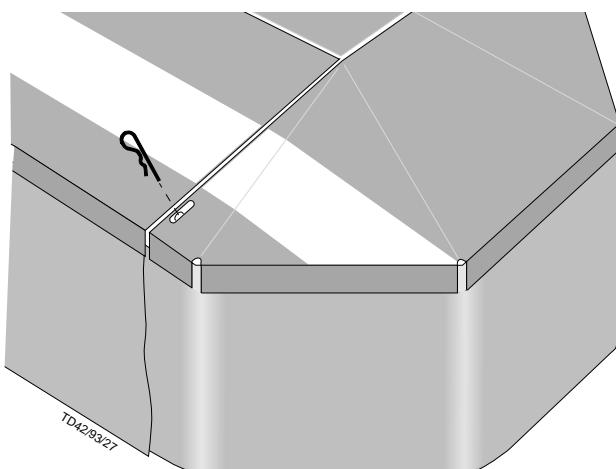

For safety reasons it is necessary to wait for mowing disks to stop completely before raising and securing guard plates.

- Secure both guard plates in this position with spring pin.
- Use tractor's lifting gear to raise implement.

## Work position

Side guard plates (10 and 11) must be lowered before commencing work.

- Secure both guard plates in this position with spring pin.

**For safety reasons mowing may only be conducted in this position.**

## Adjusting the Cutting Height

By turning the upper link spindle (16) cutting disks can be brought into a horizontal or slightly inclined forward position.

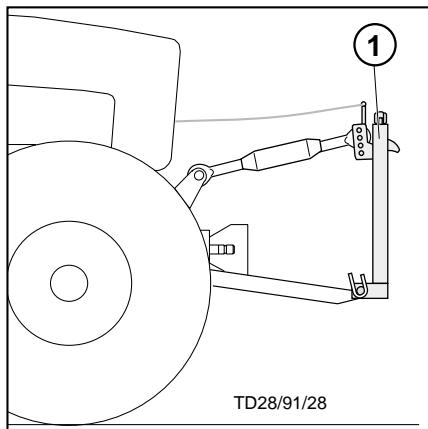

This inclination should not be more than 5° max.

## Quick-coupler (1)

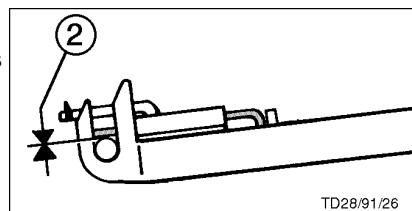

### Sicherheitshinweise:

siehe Anhang-A1 Pkt. 8a.-h.)

- Install quick-coupler (Weiste triangle) on the front lifting gear in a vertical or slightly tilted forward position.

- Tighten lower link bolts (2) free from play.

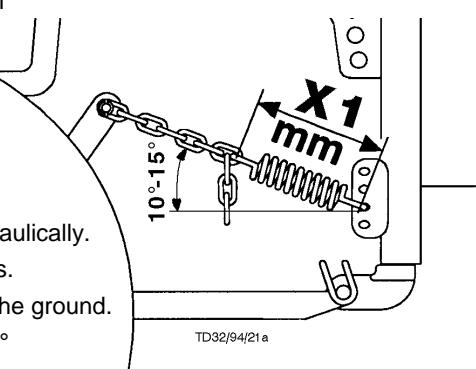

## Spring Tension

### Installation kit (optional extra)

The application force of mowing drums to the ground is controlled through spring tension.

- Raise implement hydraulically.
- Connect draw springs.
- Lower implement to the ground.

Check angle 10° - 15°

### Setting measurement "X1"

**CAT 220 alpin:** X1 = 420 mm with Conditioner  
X1 = 410 mm without Conditioner

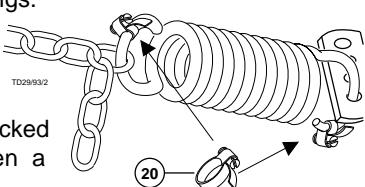

**CAT 260 alpin:** X1 = 440 mm with Conditioner  
X1 = 420 mm without Conditioner

The optimal setting measurement (X1) was not available when this book went to print. Please contact Customer Service.

- Fit hose clips (20) to draw springs.

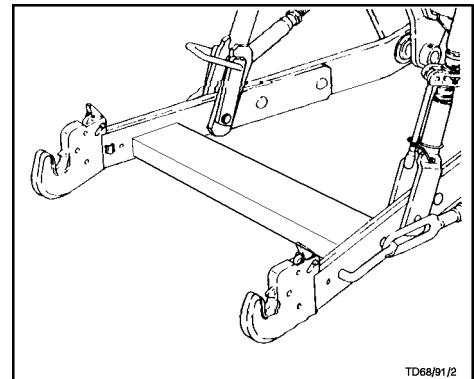

The spring tension setting need not be checked everytime implement is coupled to tractor.

However setting should be checked and, if necessary, reset when a different tractor is to be used.

## Problems with attaching

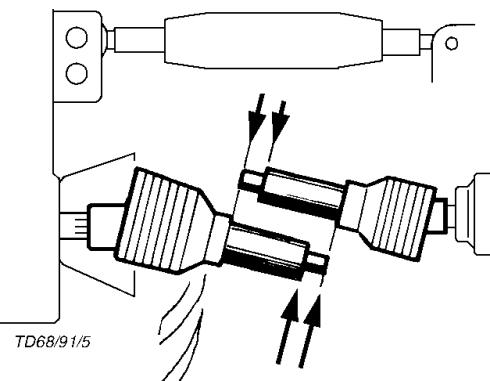

- Damage may occur to drive shaft when lowering attached implement using lifting gear with a transverse bar fitted between lower links.

In order to prevent damage it is necessary to install an attachment lift between lifting gear and Weiste triangle.

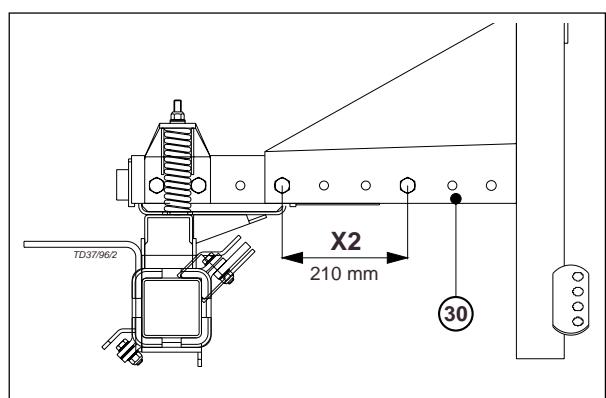

In such a case please contact Customer Service.

- On tractors where p.t.o. stub is located right at the front, the drive shaft must be shortened greatly. That means when implement is raised there is not sufficient drive shaft covering available.

In this case the attaching frame (30) is to be installed in the appropriate position.

Observe the minimum gap "X2" (210 mm) between screws!

- Connect drive shaft (see chapter "Adapting the Drive Shaft" also).

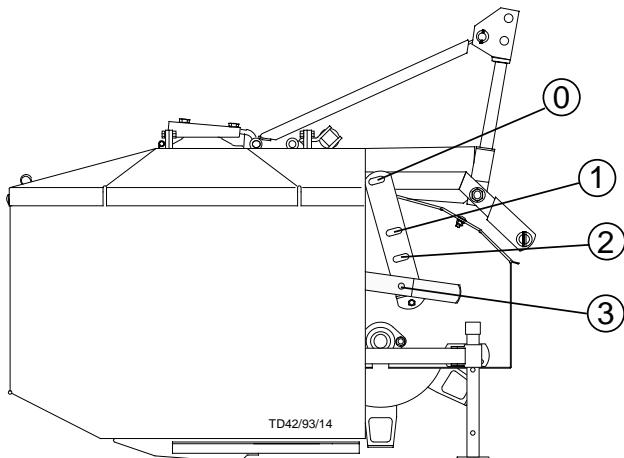

## Mähen mit dem Aufbereiter

Der Aufbereitungseffekt kann verändert werden.

- Mit dem Handhebel wird der Abstand zwischen Einstelleiste und Rotor verstellt.

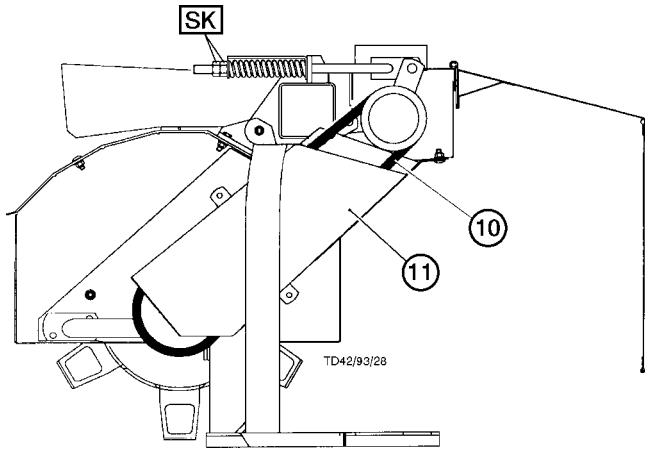

In der tiefsten Stellung (3) ist die Aufbereitung am stärksten.

Das Futter soll aber nicht zerschlagen werden.

## Aus- und Einbau des Aufbereiters

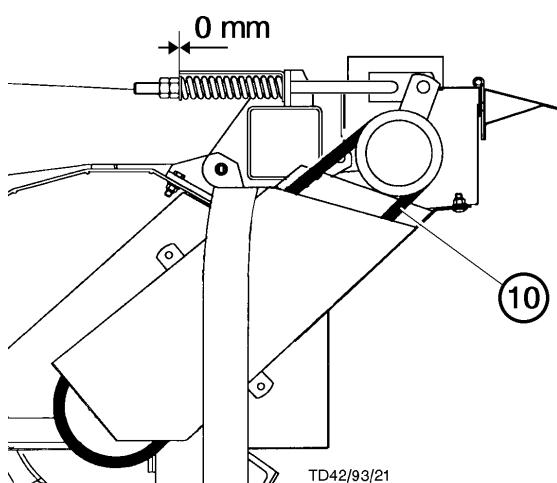

- Schutzverkleidung (11) demontieren.
- Durch zurückdrehen der Sechskantmuttern (SK) die Keilriemenspannung verringern.
- Die 4 Antriebsriemen (10) abnehmen.

## Keilriemenspannung

Bei richtig eingestellter Keilriemenspannung beträgt der Abstand zwischen Anzeiger und Scheibe " 0 mm ".

Wird der Abstand größer, muß die Feder entsprechend nachgespannt werden.

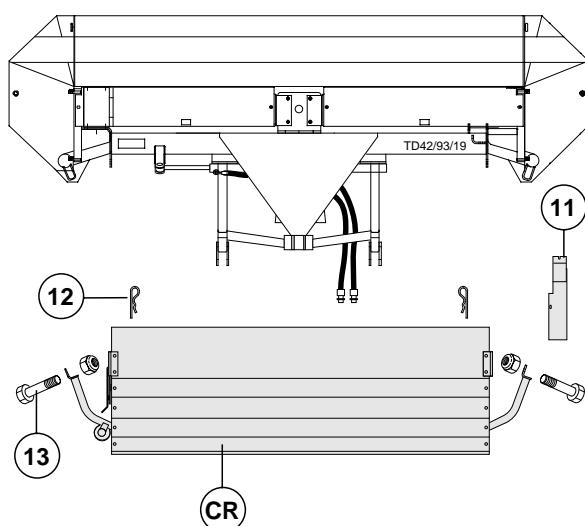

- Die beiden Federvorstecker (12) herausziehen.
- Schrauben (13) entfernen und Aufbereiter nach hinten wegziehen.

Vorsicht beim Demontieren!

Das Gewicht des Aufbereiters beträgt etwa 100kg.

## Einbau des Aufbereiters

Der Einbau erfolgt in umgekehrter Reihenfolge als der Ausbau.

- Achten Sie darauf, daß alle Schrauben festgezogen sind.

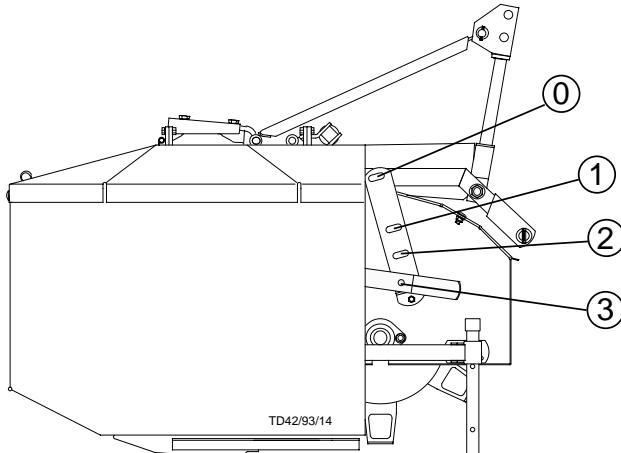

## Mowing with the conditioner

The conditioning effect can be modified.

- With lever (13), which adjusts the gap between adjustable plate and rotor.

The conditioning effect is most intense with the lever at the bottom of its travel.

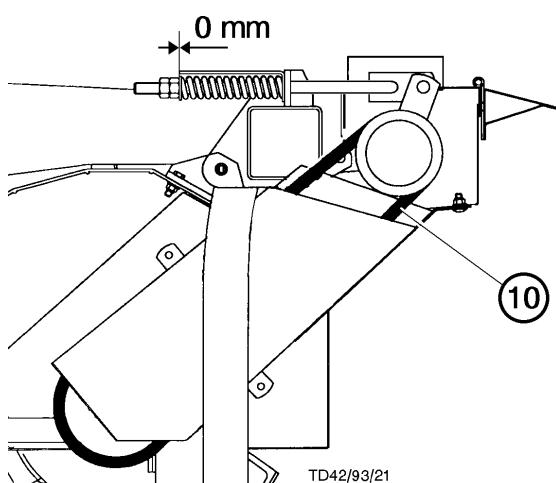

However the crop should not be chopped.

## V-belt tension

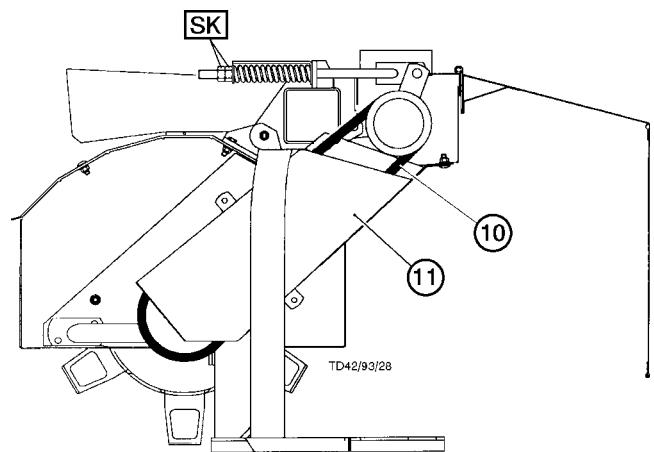

To tension pulleys correctly, the gap between indicator and pulley is "0 mm".

If the gap is greater, the tension on the spring must be increased.

## Removing and fitting the Conditioner

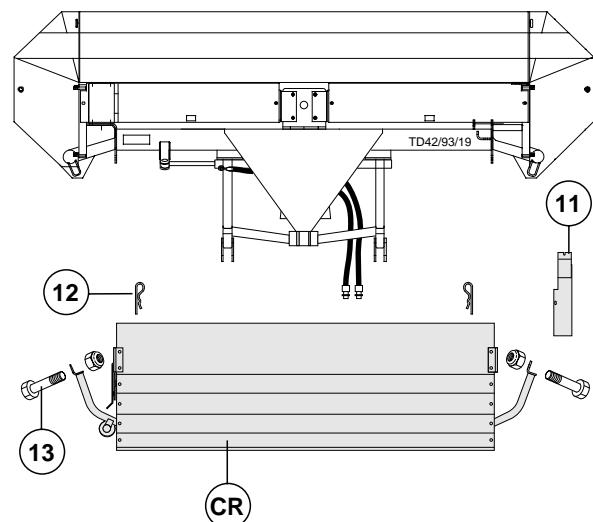

- Detach protective cover (11).
- Decrease V-belt tension by unscrewing nuts (SK).
- Remove 4 driving belts (10).

- Remove both spring pins (12).
- Remove screws (13) and pull the conditioner backwards.

Take care when removing!  
The conditioner weighs approx. 100 kg.

## Fitting the Conditioner

Fitting is carried out in reverse order to removal.

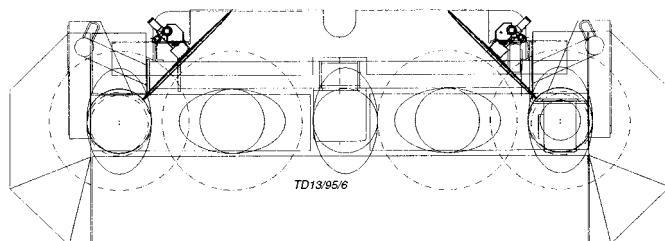

- Make sure that all screws are tightened firmly.

**CAT 220 alpin** to Masch Nr. . . .1525  
**CAT 260 alpin** to Masch Nr. . . .1360

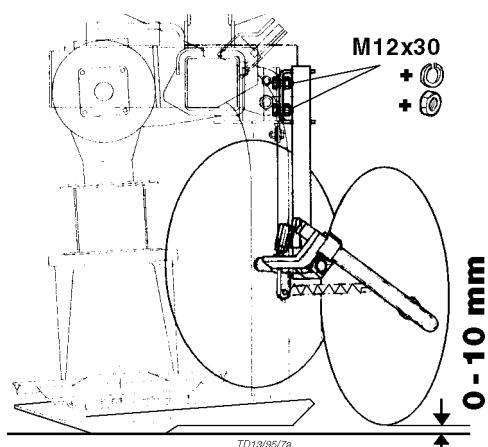

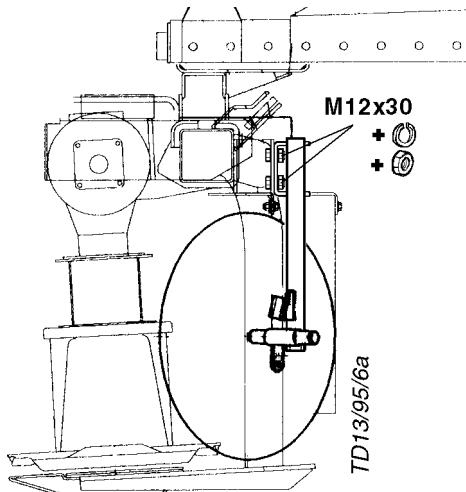

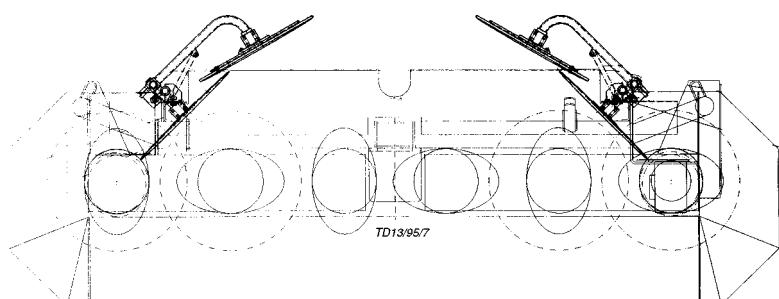

### Mower unit with swath discs<sup>1)</sup>

If a conditioner is not attached to the mower unit then the swath former can be attached for mowing.

**CAT 220 alpin** to Masch Nr....1525

**CAT 260 alpin** to Masch Nr....1360

### Setting both rubber discs

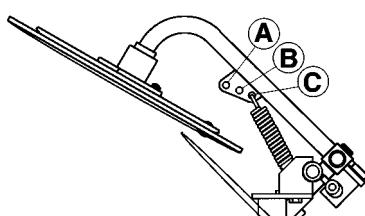

Both rubber discs should touch the ground (0 - 10 mm) when mowing.

### Setting both tension springs

A = for high dense forage

B = basic setting

C = for short forage

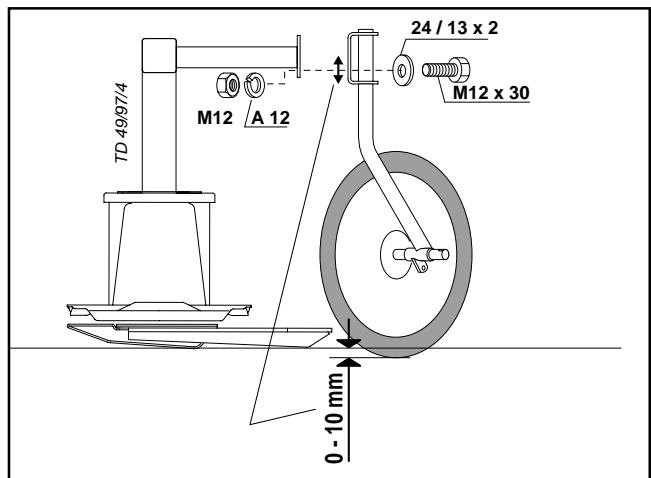

**CAT 220 alpin** from Masch Nr. . . . 1526  
**CAT 260 alpin** from Masch Nr. . . . 1361

### Mower unit with swath discs<sup>1)</sup>

If a conditioner is not attached to the mower unit then the swath former can be attached for mowing.

#### Setting both rubber discs: 0 - 10 mm

- left and right

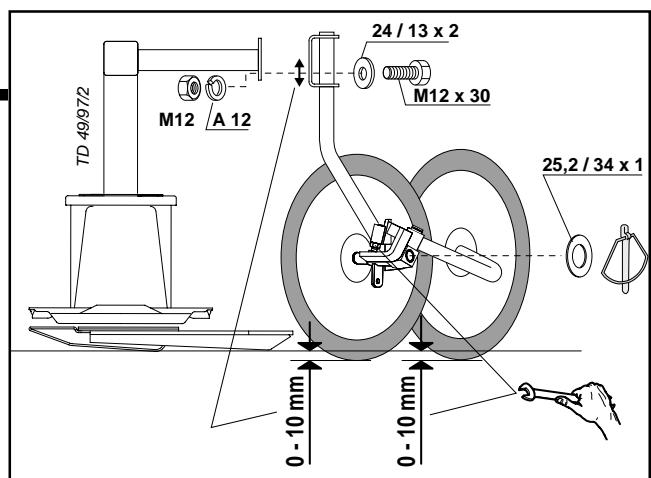

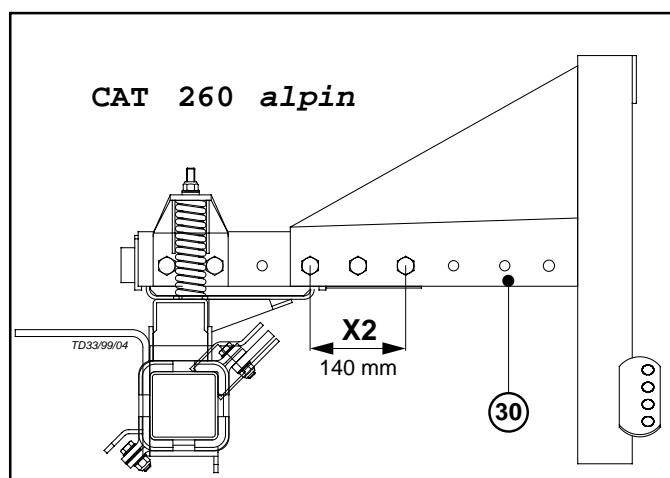

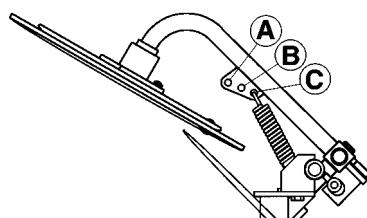

#### Setting both tension springs

A = for high dense forage

B = basic setting

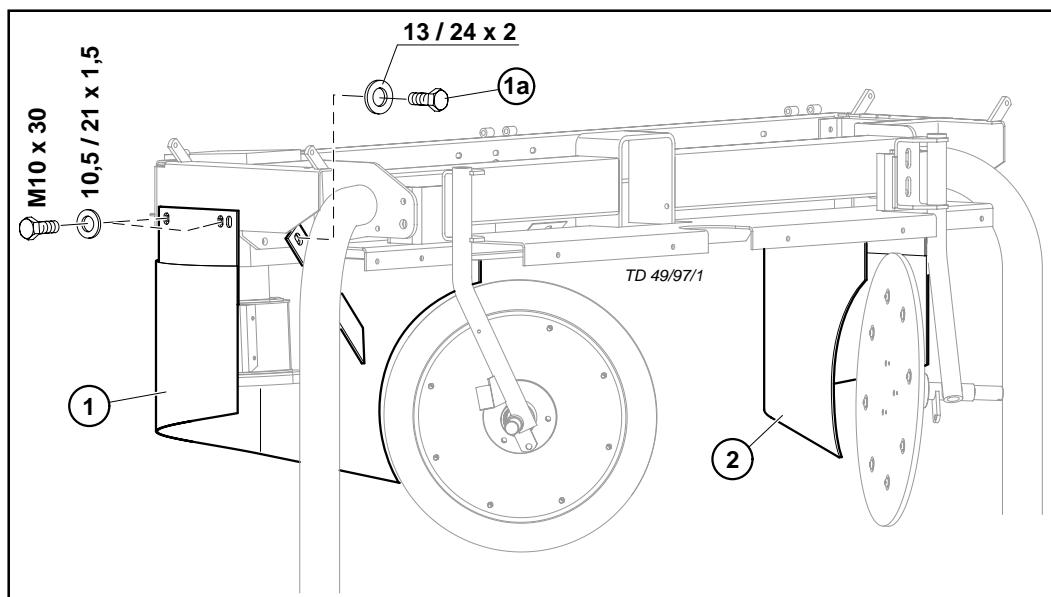

C = for short forage

#### Mount guide plates

- left (1) and right (2)

1a = Fix with gear box screws

## Important points before starting work

### Safety hints:

see supplement-A1 points 1. - 7.)

### After the first hours of operation

- Retighten all knife screw fittings.

## Safety hints

### 1. Check

- Check the condition of knives and the knife holder.
- Check cutting drums for damage (see also chapter "Maintenance").

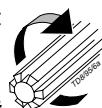

### 2. Switch-on the machine only in working position and do not exceed the prescribed power take-off speed (for example max. 540 rpm).

A transfer, which is located near the gear, advises which p.t.o. speed your mower unit is equipped for.

**540 Upm**

**1000 Upm**

- Turn the p.t.o. on only when all safety devices (coverings, protective aprons, casings, etc.) are in proper condition and attached to the implement in the correct protective positions.

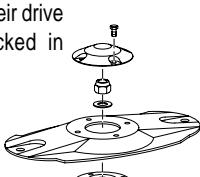

### 3. Pay attention to correct p.t.o. direction of rotation!

### 4. Damage protection!

- The surface to be mowed must be free of obstructions or foreign objects. Such objects (e.g. large stones, pieces of wood, boundary stones, etc.) can damage the mower unit.

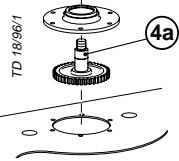

### In the event of a collision

- Stop immediately and switch off the drive.
- Carefully check the implement for damage. The mowing discs and their drive shaft must be checked in particular.
- Have the implement checked also by a specialist workshop if necessary.

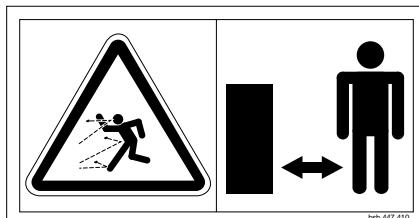

### After any contact with foreign objects

- Check the condition of knives and the knife holder.
- Retighten all knife screw fittings.

### 4. Stay clear while engine is running.

- Keep people out of the danger zone - foreign bodies which can be ejected by the mower could injure them.

Special care is necessary on or near stony ground.

### 5. Wear hearing protection

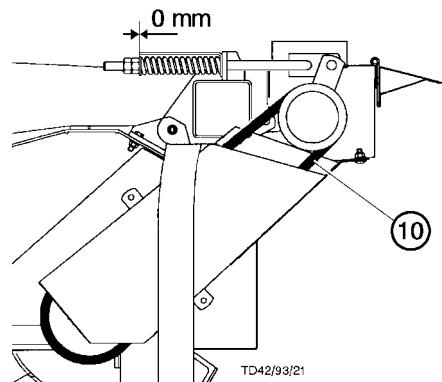

The noise level in the workplace can deviate from the measured value (see Technical Data) partly because of the differing cabin types of various tractors.

- If a noise level of 85 dB(A) is reached or exceeded, the farmer must have suitable hearing protection in readiness (UVV 1.1 §2).
- If a noise level of 90 dB(A) is reached or exceeded, the hearing protection must be worn (UVV 1.1 § 16).

### 6. Check V-belt tension!

If the gap between indicator and pulley is greater than "0 mm" the tension on the spring must be increased accordingly.

- Fix hydraulic lower links in a way that the machine cannot swing out sideways.

## Operation

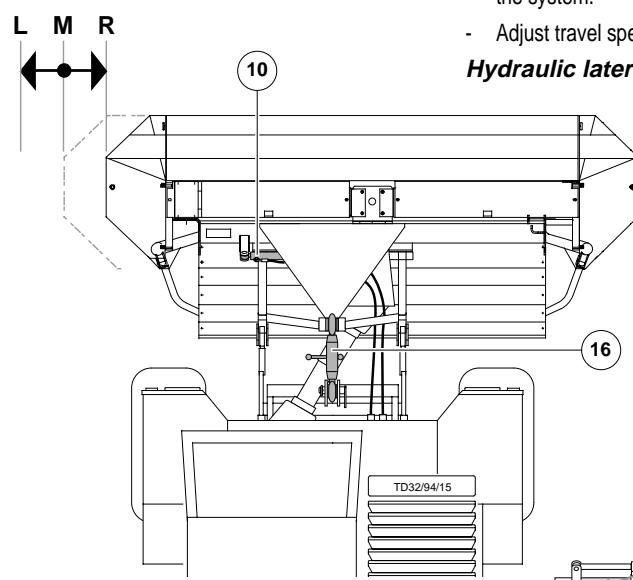

### 1. Adjust cutting height by turning upper link spindle (inclination of the cutting discs max. 5°).

### 2. To mow, gradually supply power to the p.t.o. before entering the crop and bring the mowing discs up to full revs.

Smoothly increase the p.t.o. speed, in order to avoid noises in the free-wheel conditioned by the system.

- Adjust travel speed to terrain and crop.

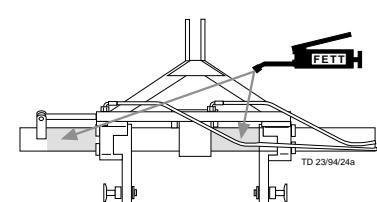

### Hydraulic lateral shifting

The cutter bar can be shifted left (L) or right (R) using the hydraulic cylinder (10). This is advantageous for tractors with an extra wide track (dual tyres) for example.

**Take note!** Hydraulic lateral shifting must only be effected when the implement has been raised.

**Vor Inbetriebnahme** das Schiebeprofil einfetten.

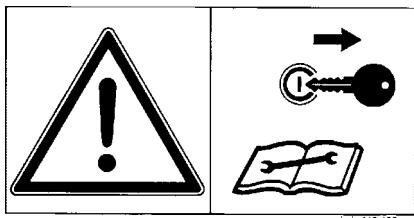

## General maintenance hints

In order to keep the implement in good condition after long periods of operation, please observe the following points:

### Safety points

- Turn engine off when adjustment, service and repair work is to be done.

- Do not work under the machine without safe support.
- Retighten all screws after the first hours of operation.  
Check blade screws in particular.
- Observe maintenance hints for angular gear and cutter bar.

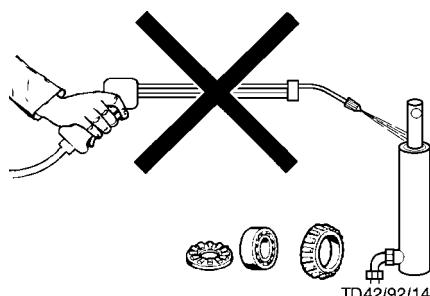

### Winter storage

- Thoroughly clean machine before storage.
- Put up protection against weather.
- Change or replenish gear oil.
- Protect exposed parts from rust.
- Lubricate all greasing points according to lubrication chart.

## Cleaning of machine parts

### Attention!

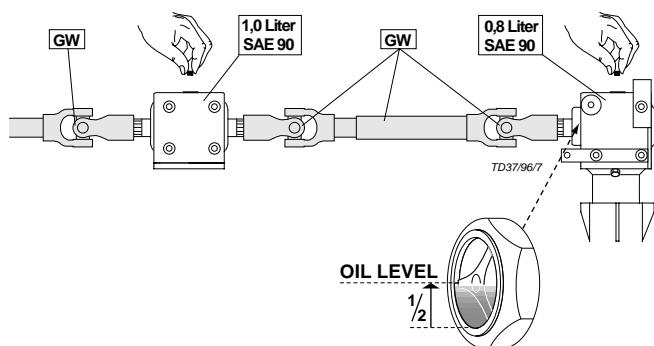

**Do not use high-pressure washers for the cleaning of bearing- and hydraulic parts.**

- Danger of rust!
- After cleaning, grease the machine according to the lubrication chart and carry out a short test run.
- Cleaning with too high pressure may do damage to varnish.

## Cardan shafts

- Lubricate both shafts (GW) every 20 hours of operation.
- Pull sliding sections apart and grease well.

## Angular gear

**1,0 litre SAE 90  
0,8 litre SAE 90**

- Change oil after the first 50 operating hours.  
Under normal operating conditions, oil is to be replenished annually.

### Oil level check

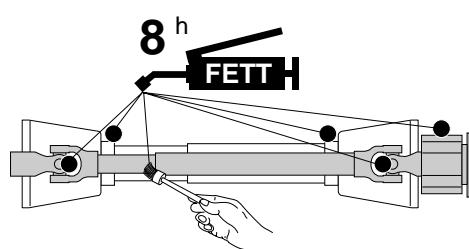

- at observation window (OIL LEVEL)

### Change oil

- after 100 ha at the latest.
- Remove drain plug, drain old oil and dispose of properly.

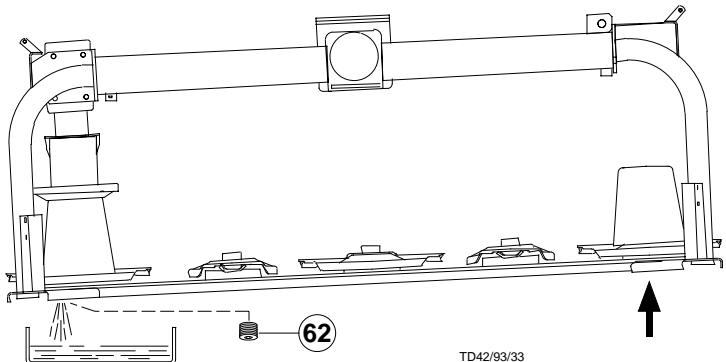

## Drive shaft

- Lubricate drive shaft every 8 hours of operation.
- Pull sliding sections apart and grease well.

## Cutter bar oil change

- First oil change after the first 50 operating hours.
  - An oil change should then be carried out after every 100 ha.
- Quantity:** CAT 220 alpin = 1,6 lt. SAE 90  
**Quantity:** CAT 260 alpin = 2,6 lt. SAE 90
- Lift the right side of the mower bar so that the oil gathers in the drain plug area.
  - Remove drain plug (62), drain old oil and dispose of properly.

## Variation-1

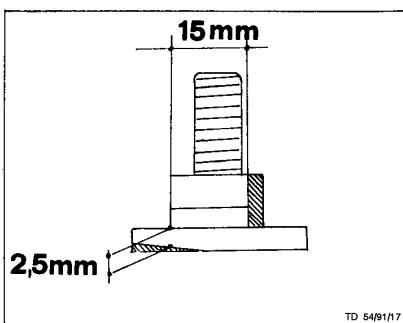

### Fixing cutter blades using screw-threaded blade bolts

**Attention!**  
**For your safety!**

Regularly check that cutter blades are tightened firmly!

- Buckled or damaged cutter blades must not be used further.
- Cutter blades worn on one side can be turned over and installed again.
- Blade bolts must be replaced when lower edge is well worn or at a diameter of 15 mm.

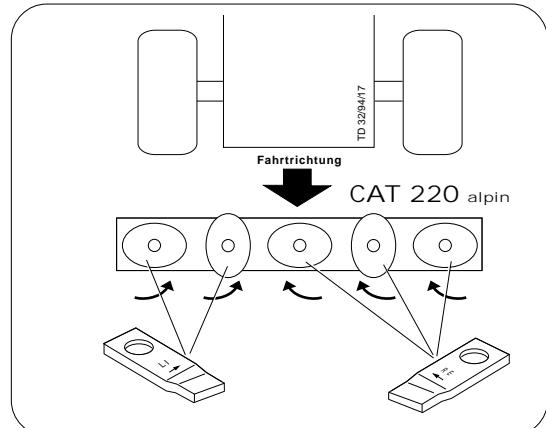

### Installing cutter blades

#### Take note!

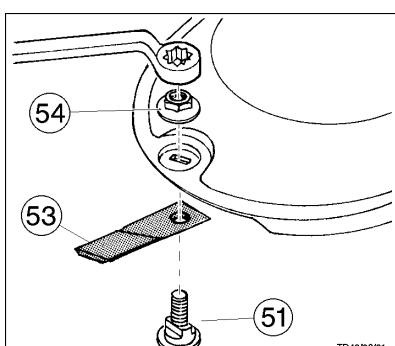

The arrow on the cutter blade shows the cutter disc's direction of turn.

- To install, clean back plates from varnish.

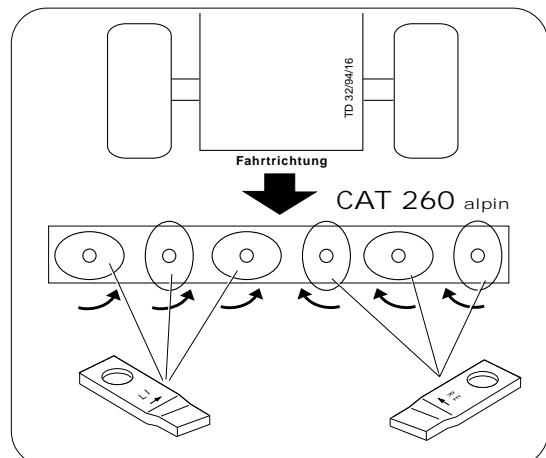

- Cutter blades on a cutter disc should wear out simultaneously (danger of imbalance).

Otherwise they are to be replaced with new ones (replace in pairs).

#### Parts:

Screw (51)  
Cutter blade (53)  
Nut (54) (STM = 120 Nm).

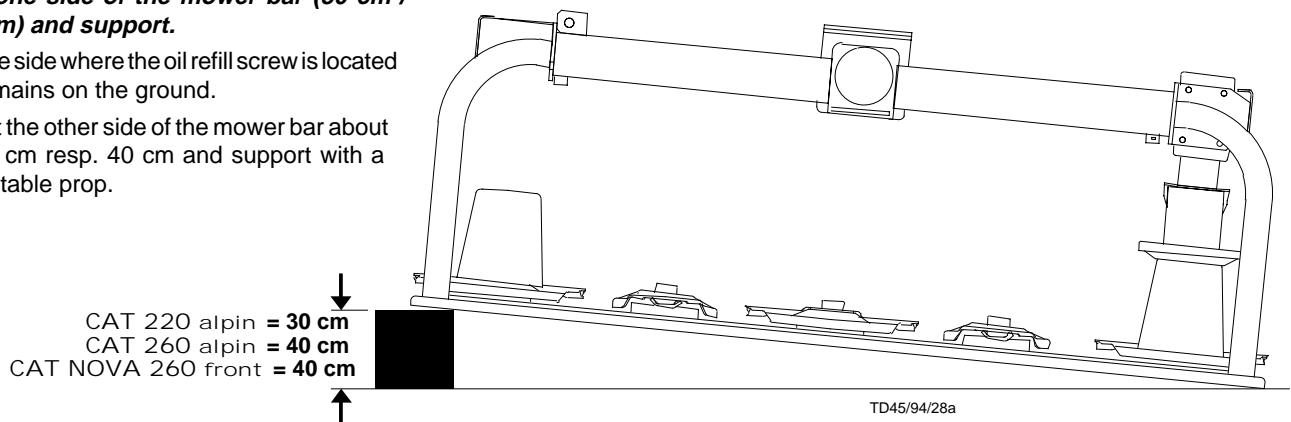

## Cutter bar oil level check

- Under normal operating conditions, oil is to be replenished annually.

### 1. Lift one side of the mower bar (30 cm / 40 cm) and support.

- The side where the oil refill screw is located remains on the ground.
- Lift the other side of the mower bar about 30 cm resp. 40 cm and support with a suitable prop.

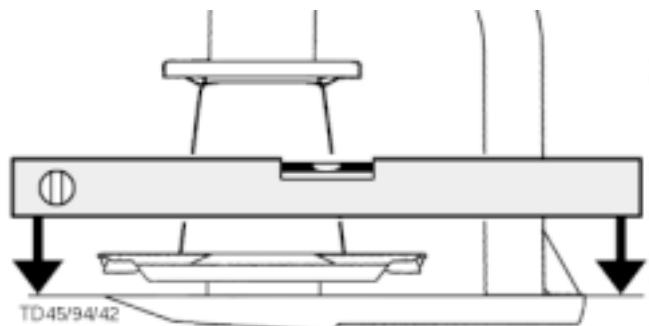

### 2. Let mower bar stand in this position for some 15 minutes.

- This time is necessary to allow the oil to gather in the lower area of the mower bar.

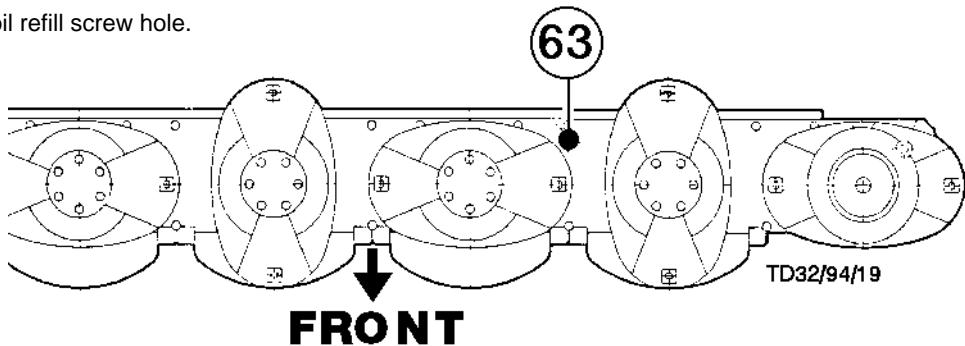

#### Important!

In doing so the cutter bar must be in horizontal position.

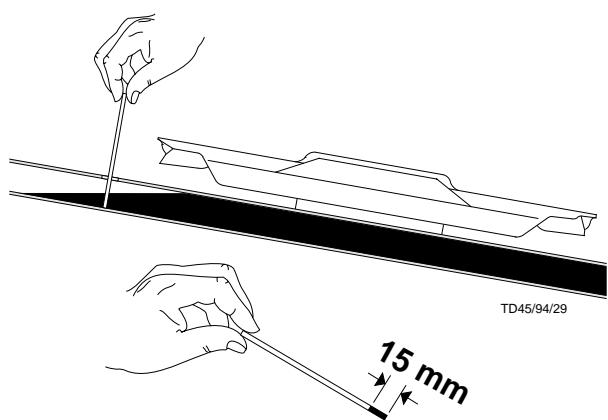

### 3. Remove oil refill screw (63).

The oil level is measured at the oil refill screw hole.

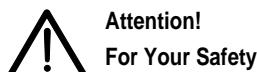

### 4. Check the "15 mm" oil level using a wooden stick and top-up if necessary.

- Too much oil leads to the mower bar overheating during operation.
- Too little oil does not guarantee the necessary lubrication.

## Variation 2

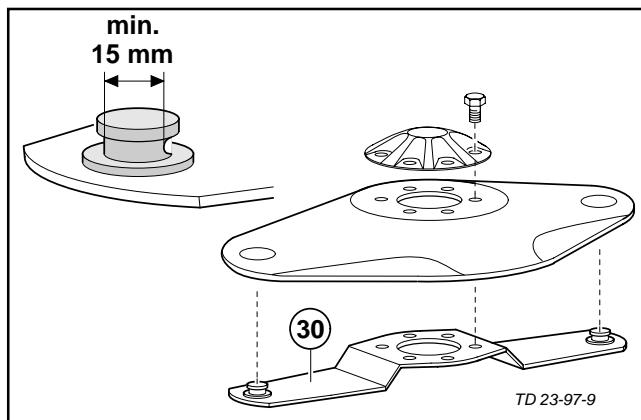

### Holder for a quick change of cutter blades

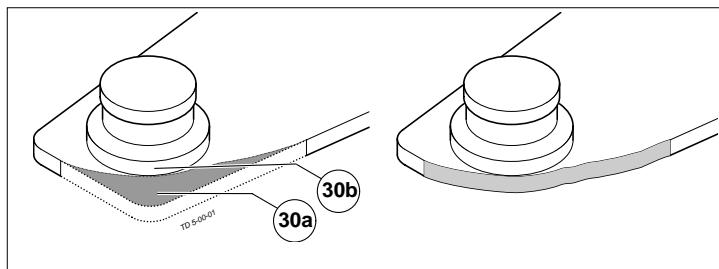

- Regularly check that cutter blades are tightened firmly!
  - Cutter blades on a cutter disc should wear out simultaneously (danger of imbalance). Otherwise they are to be replaced with new ones (replace in pairs).
  - Buckled or damaged cutter blades must not be used further.
- Buckled, damaged and/or worn cutter blade holders (30) should not be used further.

#### Replace with new cutter holder (30)

- If the the cutter blade bolt in the centre are worn down to 15 mm.

- If the worn area (30a) has reached the cutter blade bolt.
  - If the cutter blade bolt is worn in the lower area (30b).
- Cutter blade bolts may not be worn in this area (30b) otherwise the fit cannot be guaranteed.

### Checking the mowing blade suspension

- Normal check every 50 hours.
- Check more often when mowing on stony terrain or in other difficult operating conditions.
- Check immediately after driving over a hard obstacle (e.g. stones pieces of wood, ect).

#### Carry out a check

- as described in chapter „Changing the Cutter Blades“

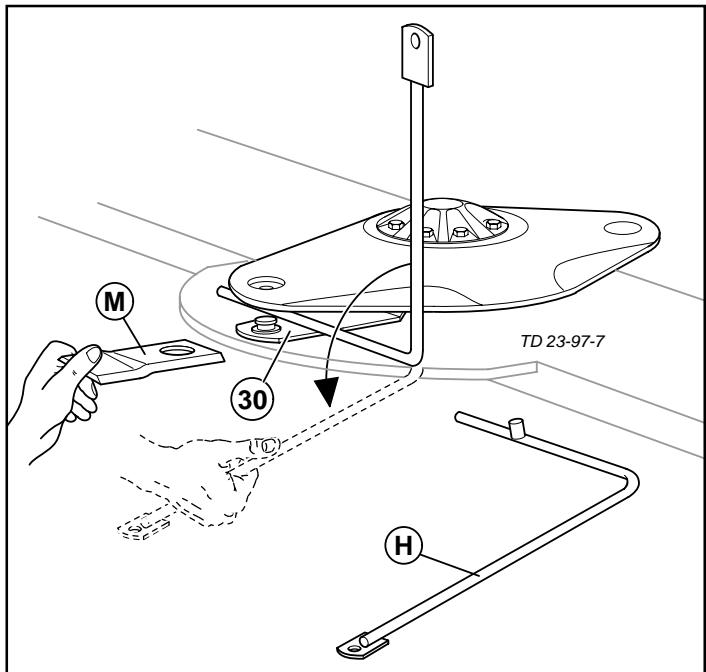

#### Take note!

Damaged, buckled and worn out parts must not be used further (danger of accident).

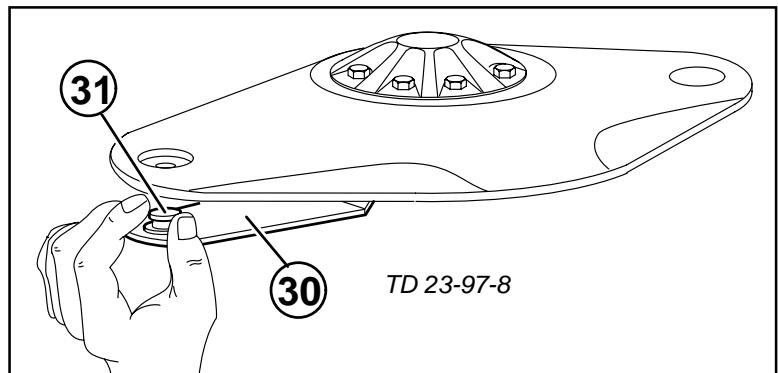

## Changing the Cutter Blades

1. Insert lever (H) horizontally between cutter disc and holder (30)
2. Push movable holder (30) down using lever (H).
3. Remove cutter blade (M)
4. Clean forage remains and dirt away.
  - around the bolts (30) and inside the lining (32)

### 5. Check:

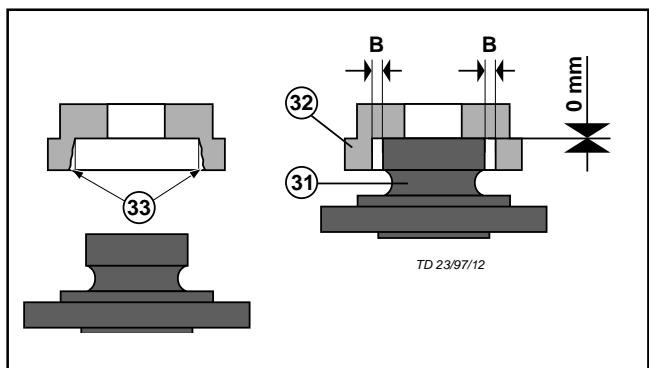

- blade bolts (31) for damage, wear and fitting
- holder (30) for damage, change in position and fitting
- lining (32) for damage.
- Side surfaces must not show signs of deformation (33)

### 6. Fit cutter blades and remove lever (H)

### 7. Check:

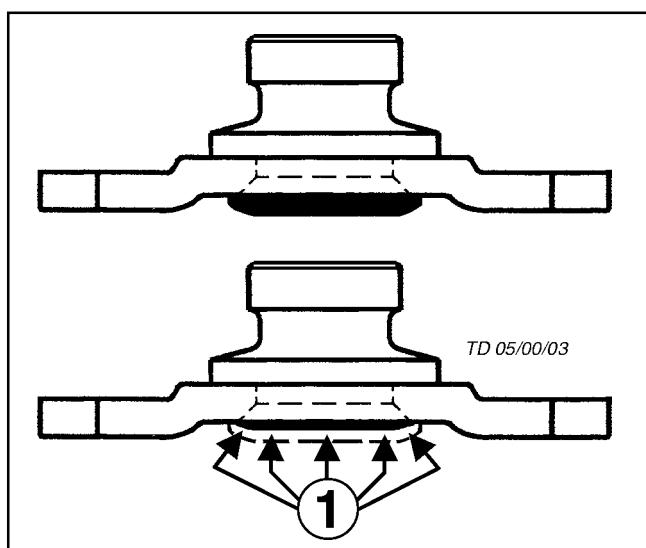

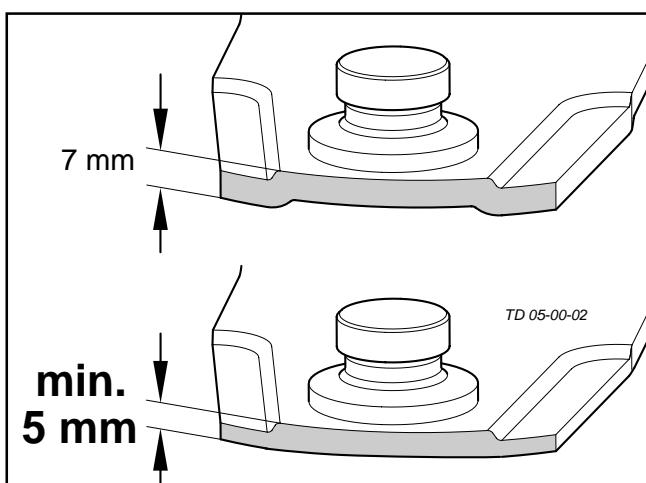

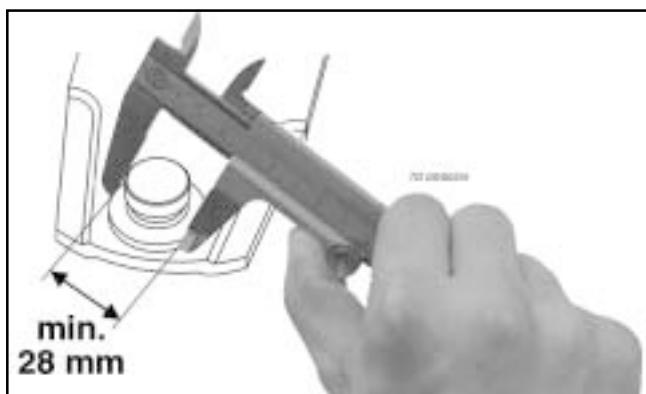

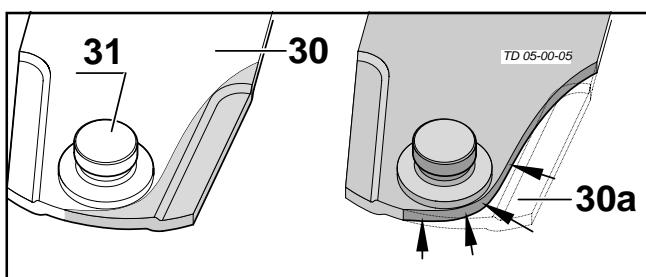

- cutter blades (31) for correct position (visual check)
  - **Gap (0 mm).** The top surface of the bolt must lie free of play.
  - **Side gap (B).** Bolts must not touch the lining.
- that cutter blade (M) can move freely on bolt.

Visual check

# MOUNTING OF MOWING BLADE CHECKING WEAR

GB

## Attention ! Danger of accident if wearing parts are worn

### Wearing parts are:

- mounting of mowing blades (30)
- bolts of mowing blades (31)

If such wearing parts are worn out they must not be used any longer , otherwise it can no longer be guaranteed that the pin of the mowing blade is firmly adjusted and accidents may be caused through parts that are flunged away (e.g. mowing blades, fragments...)

### Check the suspension of mowing blades as to wear and other damage:

- every time before bringing the machine into operational use
- several times during use
- immediately after hitting an obstacle (e.g. a stone, piece of wood, metal,...)

### Process of visual control:

1. remove mowing blades
2. remove grass and dirt
- around pin (31)

## Attention !

### Danger of accident if:

- the wearing area (30a) is worn up to the pin of the mowing blade (31)
- the large pin diameter is 28 mm or less
- the profile is only 5 mm or less (original measure = 7 mm)
- the riveted joint (1 ) of the pin is worn
- the pin of the blade is no longer firmly seated

If you notice one or several of these characteristics of wear stop mowing at once!  
Worn parts must be replaced by original parts made by Pöttinger immediately !

**I Schema di ingrassaggio**

**CAT 220 alpin****(Type PSM 366)**

Three-point linkage (40 cm adjustable)	Cat. I/II
Working width	2,16 m
No. of mowing discs	5
No. of knives per disc	2
Coverage up to	2,2 ha/h
Max. p.t.o. speed	540 rpm
Weight without conditioner	approx. 295 kg
Weight with conditioner	approx. 390 kg
Required power without conditioner	21 kW (28 HP)
Required power with conditioner	26 kW (35 HP)
Use with tractors up to max.	40 kW (55 HP)
Permanent sound emmission level	91,1 dB(A)

**Optional equipment:**

- Conditioner
- Hydraulic lateral shifting

All data subject to revision.

**The defined use of the mower unit**

- The "CAT 220 alpin" mower is intended solely for normal use in agricultural work.
- The mowing of grassland and short stemmed fodder. Any other uses outside of these are regarded as undefined. The manufacturer takes no responsibility for any resulting damage which occurs henceforth. The risk is carried by the user alone.
  - The keeping of operating, service and maintenance requirements layed down by the manufacturer also come under the heading of „defined use“.

Permanent sound emmission level	92,9 dB(A)

**Optional equipment:**

- Conditioner
- Hydraulic lateral shifting

All data subject to revision.

**The defined use of the mower unit**

- The "CAT 260 alpin" mower is intended solely for normal use in agricultural work.
- The mowing of grassland and short stemmed fodder. Any other uses outside of these are regarded as undefined. The manufacturer takes no responsibility for any resulting damage which occurs henceforth. The risk is carried by the user alone.
  - The keeping of operating, service and maintenance requirements layed down by the manufacturer also come under the heading of „defined use“.

**Position of Vehicle Identification Plate**

The factory number is imprinted on the accompanying Vehicle Identification Plate (as shown) and on the frame. Guarantee issues and further inquiries cannot be processed without the factory number being stated.

Please enter the number onto the front page of the operating manual immediately after taking delivery of the vehicle/implement.

---

---

**Supplement**

---

**Recommendations for work safety**

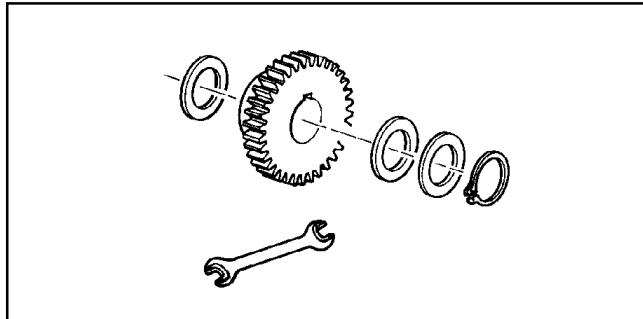

All points referring to safety in this manual are indicated by this sign.

**1.) Defined use**

- a. See "Technical Data".
- b. The keeping of operating, service and maintenance requirements laid down by the manufacturer also come under the heading of "defined use".

**2.) Spare parts**

- a. The **original components and accessories** have been designed especially for these machines and appliances.
- b. We want to make it quite clear that components and accessories that have not been supplied by us have not been tested by us.
- c. The installation and/or use of such products can, therefore,

negatively change or influence the construction characteristics of the appliance. We are not liable for damages caused by the use of components and accessories that have not been supplied by us.

- d. Alterations and the use of auxiliary parts that are not permitted by the manufacturer render all liability invalid.

**3.) Protection devices**

All protection devices must remain on the machine and be maintained in proper condition. Punctual replacement of worn and damaged covers is essential.

**4.) Before starting work**

- a. Before commencing work, the operator must be aware of all operating devices and functions. The learning of these is too late after having already commenced operation!
- b. The vehicle is to be tested for traffic and operating safety before each operation.

**5.) Asbestos**

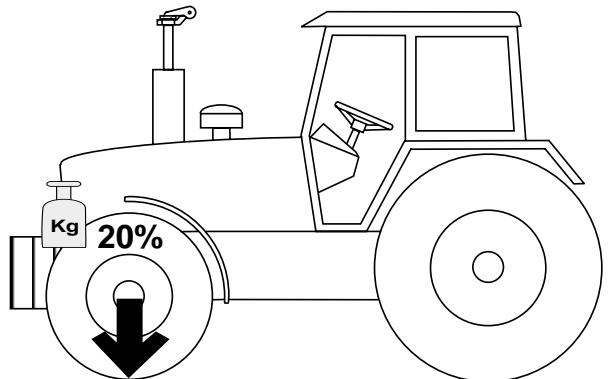

- Certain sub-supplied components of the vehicle may contain asbestos due to technical reasons. Observe the warning on spare parts.

**6.) Transport of persons prohibited**

- a. The transport of persons on the machine is not permitted.
- b. The machine may only be driven on public roads when in the position stipulated for road transport.

**7.) Driving ability with auxiliary equipment**

- a. The towing vehicle is to be sufficiently equipped with weights at the front or at the rear in order to guarantee the steering and braking capacity (a minimum of 20% of the vehicle's tare weight on the front axle).

- b. The driving ability is influenced by ground conditions and by the auxiliary equipment. The driving must be adapted to the corresponding terrain and ground conditions.
- c. When driving through curves with a connected appliance, observe the radius and swinging mass of the appliance.
- d. When travelling in a curve with attached or semimounted implements, take into account the working range and swing mass of the implement!

**8.) General**

- a. Before attaching implement to three-point linkage, move system lever into a position whereby unintentional raising or lowering is ruled out!
- b. Danger of injury exists when coupling implement to tractor!
- c. Danger of injury through crushing and cutting exists in the three-point linkage area!
- d. Do not stand between tractor and implement when using three-point linkage external operation!
- e. Attach and detach drive shaft only when motor has stopped.
- f. When transporting with raised implement, secure operating lever against lowering!
- g. Before leaving tractor, lower attached implement to the ground and remove ignition key!
- h. Nobody is to stand between tractor and implement without tractor being secured against rolling using parking brake and/or wheel chocks!
- i. For all maintenance, service and modification work, turn driving motor off and remove universal drive.

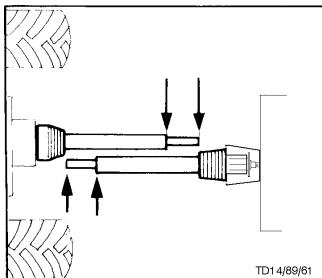

**9.) Cleaning the machine**

Do not use high-pressure washers for the cleaning of bearing- and hydraulic parts.

## DRIVESHAFT

**Important!** Only use the indicated or accompanying drive shaft, otherwise the right to claim under guarantee for any possible damage does not exist.

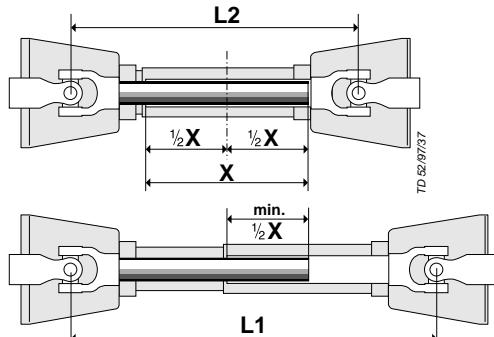

TD14/89/61

### Matching driveshaft to tractor

To determine the actual length required, hold the two halves of the driveshaft side by side.

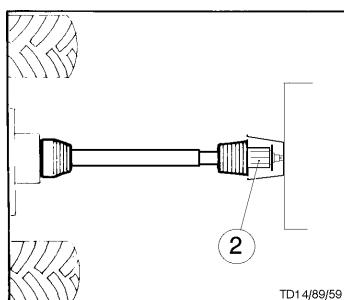

### Procedure for cutting to length

- To determine length required, set implement in closest working position (L2) to tractor, hold driveshaft halves side by side and mark off.

#### Important!

- Note the maximum operating length (L1)
  - Try to attain the greatest possible shaft overlap (min.  $\frac{1}{2} X$ )!
- Shorten inside and outside tube guard by the same amount.
- Fit torque limiter (2) of drive shaft to implement end of driveshaft!
- Always check that drive shaft locks are securely engaged before starting work.

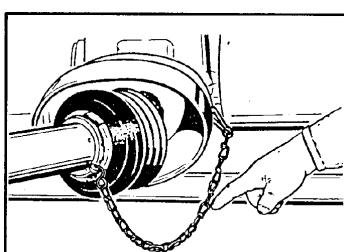

TD14/89/59

### Retaining chain

- Use chain to prevent tube guard from rotating.

Take care that chain does not impede driveshaft pivoting.

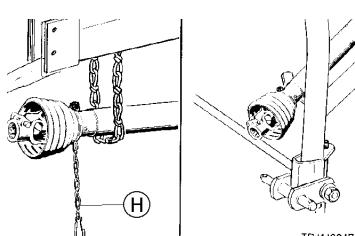

TD41/88/68

### Rules for working

Never exceed the maximum p. t. o. speed when using the implement.

- When the p.t.o. is switched off, the implement hitched up may not stop at once.
- Do not go close to the implement until all motion has stopped; only then may work be done on it.
- When the implement is parked, either remove the driveshaft and store it, or secure it with a chain. (Do not use retaining chain (H) for this).

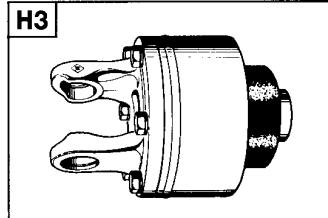

TD41/88/71

### 1) How a cam type cut out safety clutch works:

This overload clutch switches the torque transmitted to zero if overloaded. To revert to normal operation, stop the p.t.o. drive briefly.

The clutch reengages at a speed below 200 rpm.

H3

#### IMPORTANT !

The overload clutch on the driveshaft is not a "Full up" indicator. It is purely a torque limiter designed to protect the implement against damage.

Driving the right way will avoid triggering the clutch too often, and thus causing unnecessary wear on it and the implement.

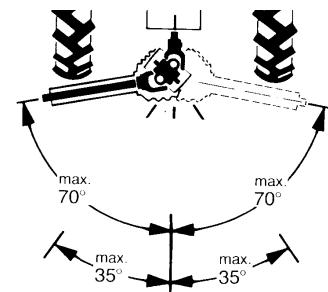

### 2) Wide-angle joint :

Maximum angle of deflection when working/stationary : 70°

### 3) Standard joint :

Maximum angle of deflection when stationary: 90°

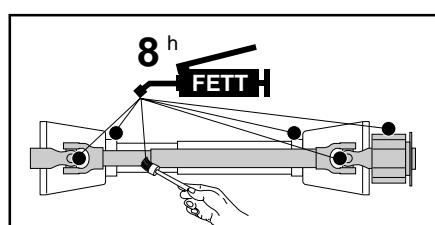

Maximum angle of deflection when working: 35°

### Maintenance

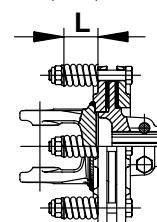

#### Replace worn-out covers/guards at once.

- Lubricate with a brand-name grease before starting work and every 8 hours worked.
- Before any extended period of non-use, clean and lubricate driveshaft.

For winter working, grease the tube guards, to avoid them freezing together.

K90,K90/4,K94/1

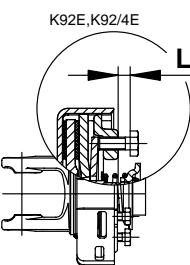

#### • Important for driveshafts with friction clutch

Prior to initial operation and after long periods out of use, check friction clutch for proper function.

- a.) Measure dimension „L“ at compression spring of K90, K90/4 and K94/1 or at set screw of K92E and K92/4E.
- b.) Loosen screws to release the pressure on the friction disk.
- c.) Tighten set screws to dimension „L“.

Clutch is ready for use.

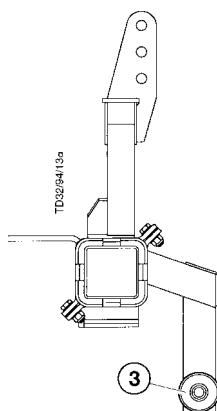

## Custom-built Attaching

Because of differing types of lifting gears on various tractor models, special attaching kits are to be used. See Spare Parts list also.

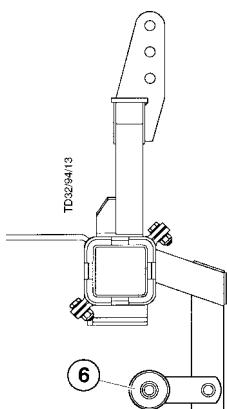

### Nußmüller Rasant and Aebi

- Installation of a kit (Pos. 3) on mower units without conditioner is necessary.
- It is not necessary to install a kit on the tractor for mower units with conditioner. This implement is already equipped with a longer attaching frame.

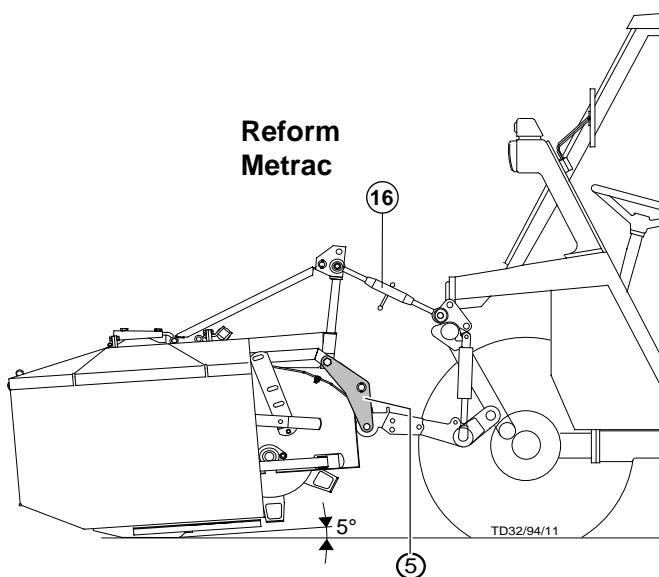

### Reform Metrac

- Installation of a kit (Pos. 6) on the tractor for mower units without conditioner is not necessary.
- Mower units with conditioner are already equipped with a longer attaching frame. The kit (Pos. 5) is to be installed in addition to this.

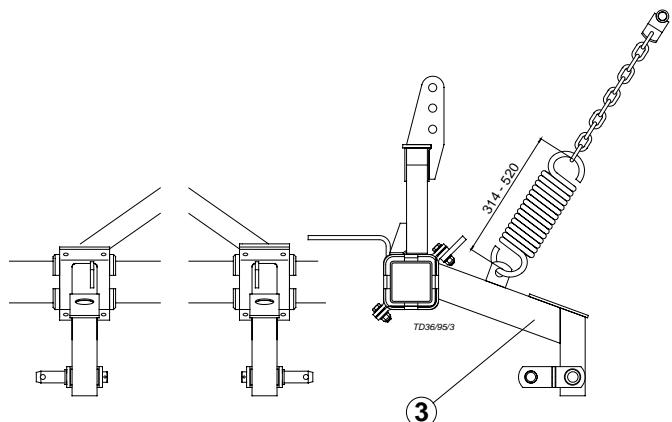

**Reform  
Metrac**

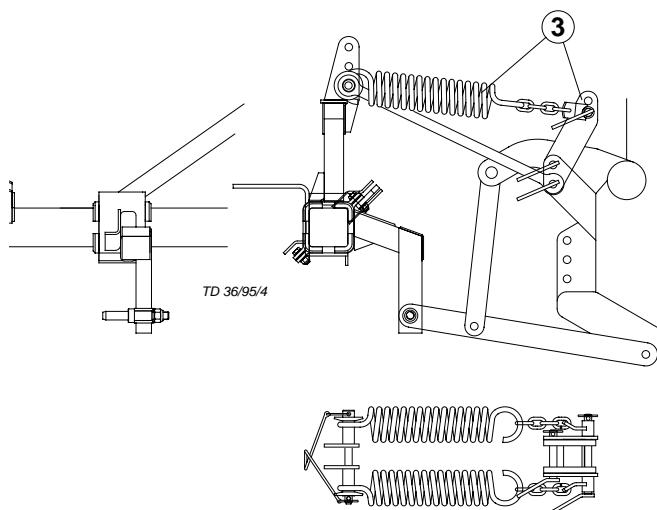

### De Pietri

- Installation of a kit (Pos. 3) on mower units without conditioner is necessary.
- It is not necessary to install a kit on the tractor for mower units with conditioner. This implement is already equipped with a longer attaching frame.

### Carraro

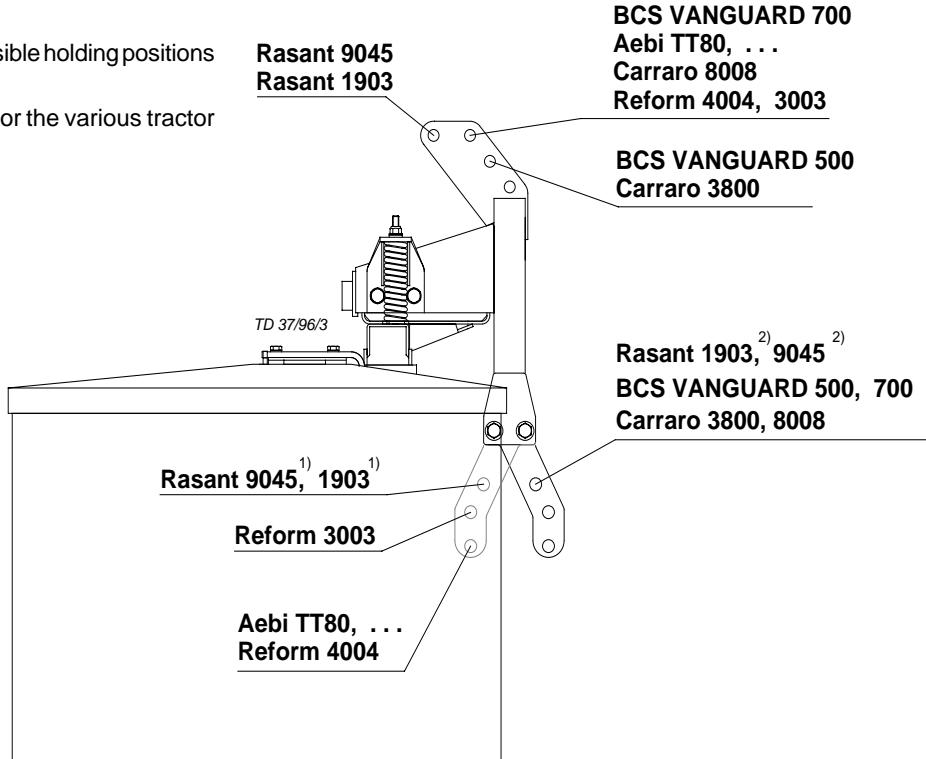

- Installation of a kit (Pos. 3) on mower units without conditioner is necessary.
- It is not necessary to install a kit on the tractor for mower units with conditioner. This implement is already equipped with a longer attaching frame.

## Universal attachment frame

This attachment frame offers many possible holding positions for the various tractor lifting gears.

This enables good mower adaptation for the various tractor types.

<sup>1)</sup> with short Oberlenker

<sup>2)</sup> with original Oberlenker

## Maximum drive shaft angle

Most drive shafts may only be angled up to a **maximum of 25°** when in continuous operation (GW max.).

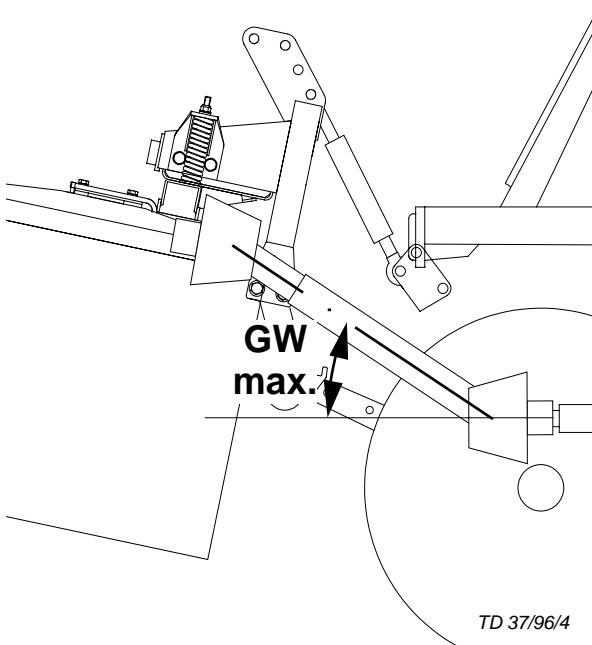

- Observe the advice in the drive shaft manufacturer's operating manual.

### In order to prevent damage

Because of the lifting gear geometry of some tractors (BCS, Carraro), an unfavourable universal-joint angle can occur when raising the implement. This leads to irregular drive shaft action.

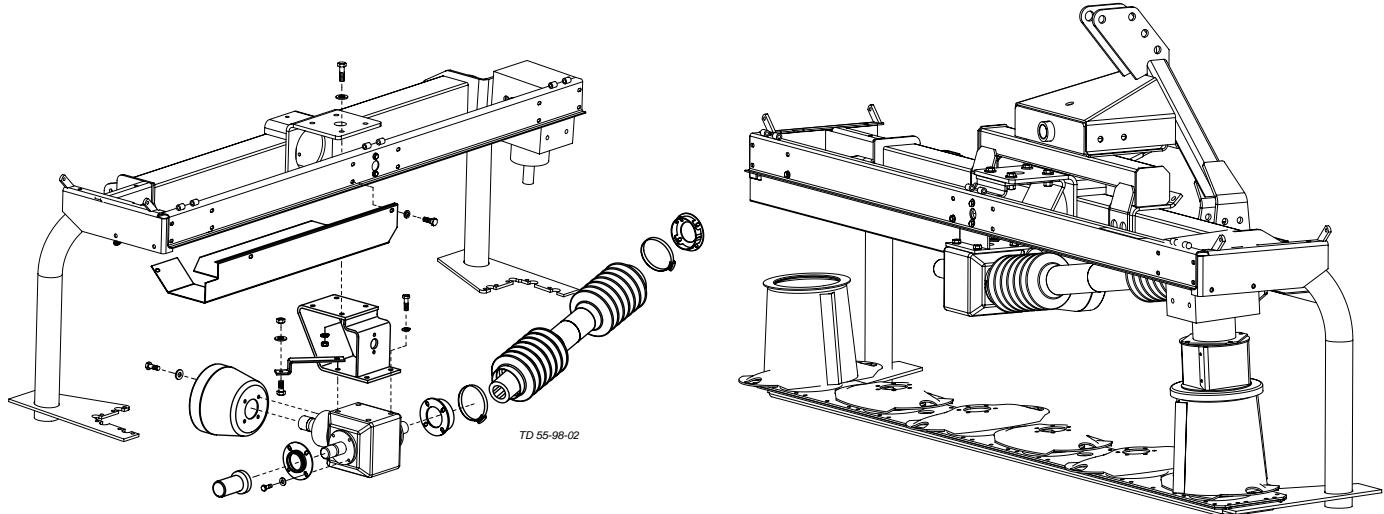

This is noticeable through abnormal noise development and vibrations.

- In order to prevent damage in such a case, turn the drive shaft off immediately and reduce the lifting height before further.

## Getriebeversetzung

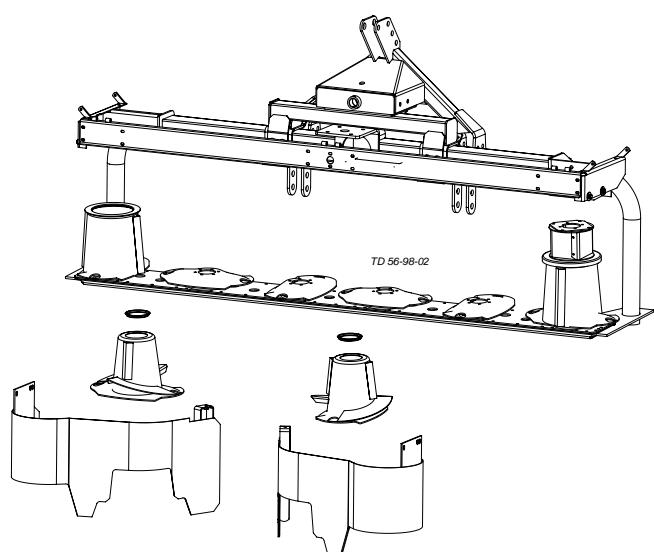

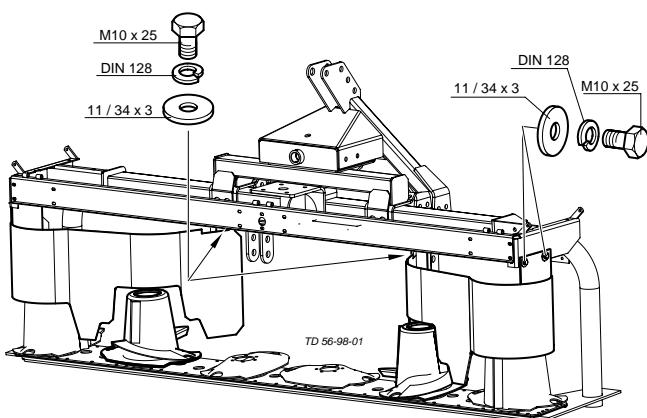

- Pasquali - Ergo 8.60 u. 8.80
- BCS - Vanguard 500 MT u. 700 MT
- Antonio Carraro - Tigretrac 5500 ; 7700 u. 8008

### Uitgave 1997

Leistung und Lebensdauer der Maschine sind von sorgfältiger Wartung und der Verwendung guten Betriebsstoffen abhängig. Unsere Betriebsstoffaflistung erleichtert die richtige Auswahl geeigneter Betriebsstoffe.

Im Schmierplan ist der jeweils einzusetzende Betriebsstoff durch die Betriebsstoffkennzahl (z.B. "III") symbolisiert. Anhand von "Betriebsstoffkennzahl" kann das geforderte Qualitätsmerkmal und das entsprechende Produkt der Mineralölfirmen festgestellt werden. Die Listen der Mineralölfirmen erhebt keinen Anspruch auf Vollständigkeit.

Getriebeöl gemäß Betriebsanleitung - jedoch mindestens 1 x jährlich wechseln.

- Ölablassschraube herausnehmen, das Altöl austauen lassen und ordnungsgemäß entsorgen.

Vor Stillegung (Winterperiode) Ölwechsel durchführen und alle Fettschmierteile abschmieren. Blanke Metallteile außen (Gelenke, usw.) mit einem Produkt gemäß "IV" in der umseitigen Tabelle vor Rost schützen.

The performance and the lifetime of the farm machines are highly depending on a careful maintenance and application of correct lubricants. Our schedule enables an easy selection of selected products.

The applicable lubricants are symbolized (eg. "III"). According to this lubricant product code number the specification, quality and brandname of oil companies may easily be determined. The listing of the oil companies is not said to be complete.

Le bon fonctionnement et la longévité des machines dépendent d'un entretien soigneux et de l'utilisation de bons lubrifiants. Notre liste facilite le choix correct des lubrifiants.

Sur le tableau de graissage, on trouve un code (p.ex. "III") se référant à un lubrifiant donné. En consultant ce code on peut facilement déterminer la spécification demandée du lubrifiant. La liste des sociétés pétrolières ne prétend pas d'être complète.

Le bon fonctionnement et la longévité des machines dépendent d'un entretien soigneux et de l'utilisation de bons lubrifiants. Notre liste facilite le choix correct des lubrifiants.

Il lubrificateur da utilizzarsi di volta in volta è simbolizzato nello schema di lubrificazione da un numero caratteristico (per es. "III"). In base al "numero caratteristico del lubrificante" si possono stabilire sia la caratteristica di qualità che il progetto corrispondente delle compagnie petrolifere. L'elenco delle compagnie petrolifere non ha pretese di completezza.

L'efficienza e la durata della macchina dipendono dall'accuratezza della sua manutenzione e dall'impiego dei lubrificanti adatti. Il nostro elenco dei lubrificanti vi agevola nella scelta del lubrificante giusto.

Il lubrificateur da utilizzarsi di volta in volta è simbolizzato nello schema di lubrificazione da un numero caratteristico (per es. "III"). ## Repairs on the cutter bar

### Install flange (F)

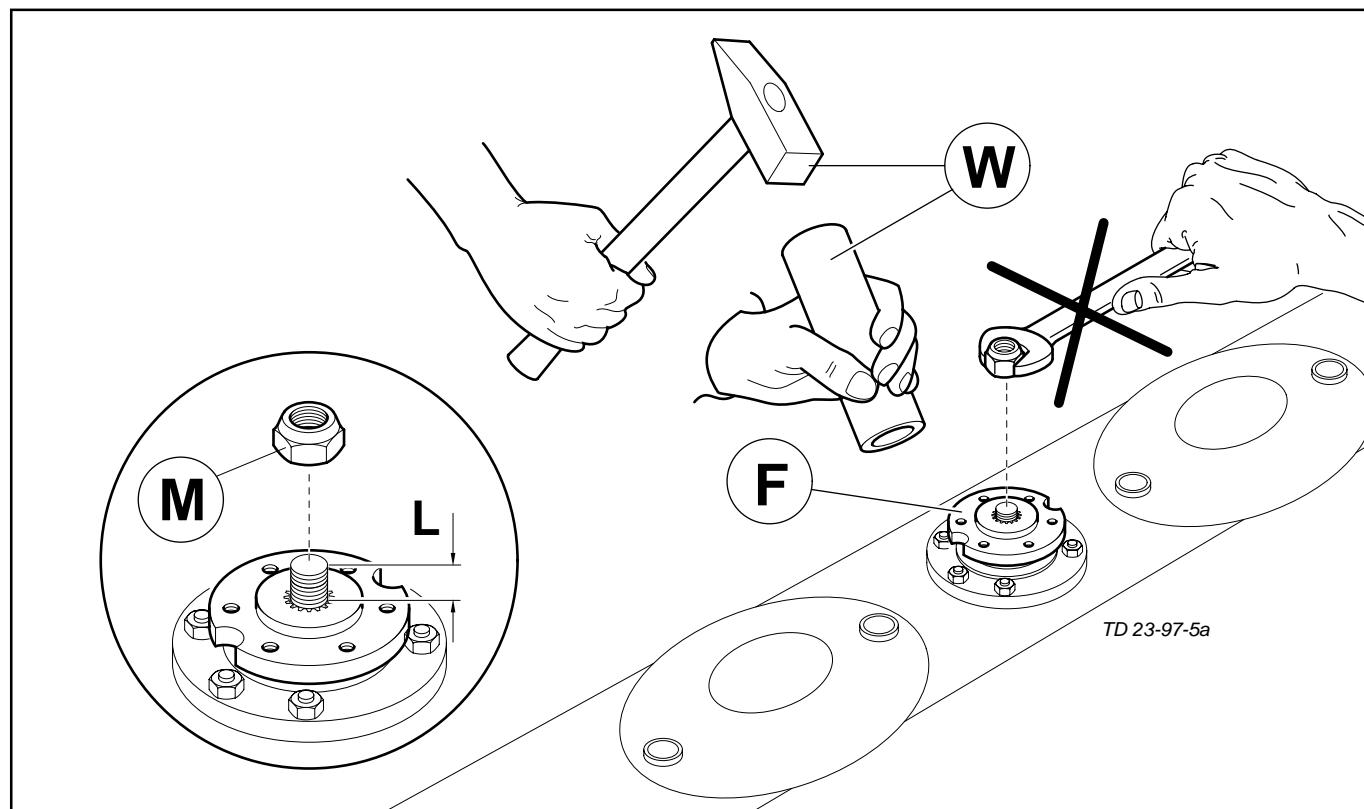

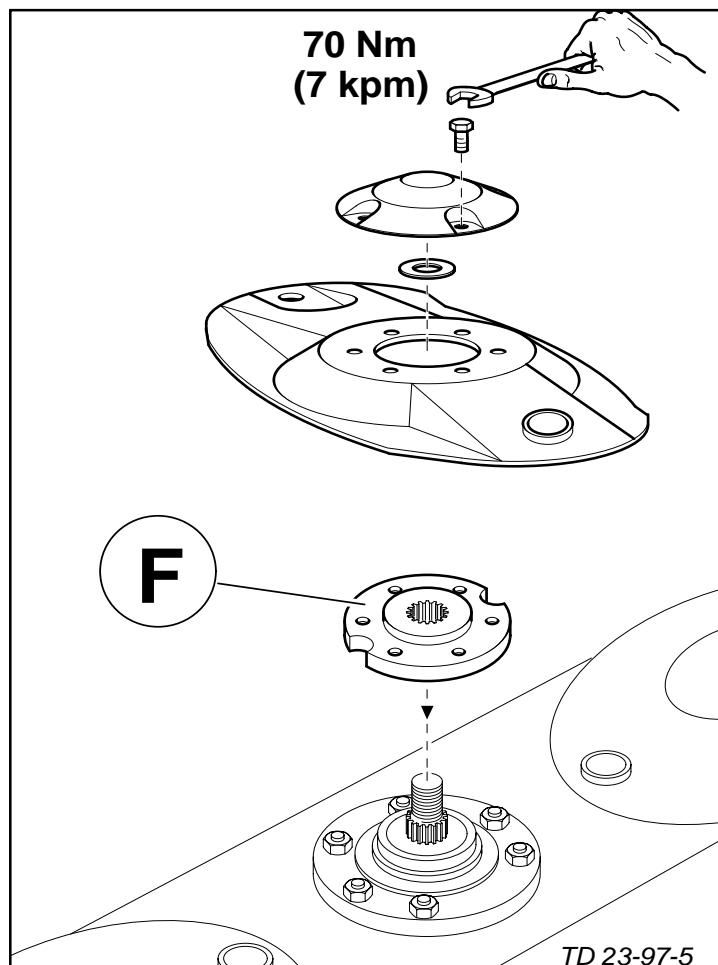

Use suitable tools (W)!

#### Important Point!

**STOP** When screwing the nut (M) on, do not push the flange (F) onto the drive shaft profile - the thread on the drive shaft could become damaged.

Only screw the nut (M) on when there is sufficient thread length (L) in order to prevent any damage.

- Secure nut (M) against loosening.
  - with „Loctite 242“ or an equivalent product.

## Appendix 1

### EC Certificate of Conformity

conforming to EEC Directions 89/392

We ALOIS PÖTTINGER Maschinenfabrik Gesellschaft m.b.H.

*(name of supplier)*

A-4710 Grieskirchen; Industriegelände 1

*(full address of company - where this concerns authorized agents within the Common Market, also state the company name and manufacturer)*

declare in sole responsibility, that the product

Scheibenmäher CAT 220 alpin, Type PSM 366

*(make, model)*

to which this certificate applies, conforms to the basic safety and health requirements of EEC Directions 89/392,

*(if applicable)*

and to the other relevant EEC Directions.

*(title and/or number and date of issue of the other EEC Directions)*

*(if applicable)*

To effect correct application of the safety and health requirements stated in the EEC Directions, the following standards and/or technical specifications were consulted:

EN 292-1 : 1991

EN 292-2 : 1991

*(title and/or number and date of issue of standards and/or specifications)*

Grieskirchen, 21.01.2000

*(Place and date of issue)*

A handwritten signature in black ink, appearing to read 'W. Leposa'.

ppa. Ing. W. Leposa  
Entwicklungsleitung

*(Name and job function of authorized person)*

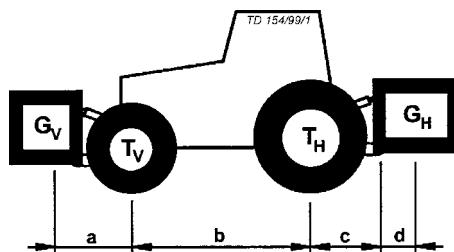

## Combination of tractor and mounted implement

The mounting of implements on the front or rear three point linkage shall not result in exceeding the maximum permissible weight, the permissible axle loads and the tyre load carrying capacities of the tractor. The front axle of the tractor must always be loaded with at least 20 % of the unladen weight of the tractor.

Make sure before buying an implement that these conditions are fulfilled by carrying out the following calculations or by weighing the tractor/implement combination.

### Determination of the total weight, the axle loads, the tyre load carrying capacity and the necessary minimum ballasting

#### For the calculation you need the following data:

$T_L$ [kg]	unladen weight of tractor	1	$a$ [m]	distance from centre of gravity for combined front mounted implement/front ballast to front axle centre	2	3
$T_V$ [kg]	front axle load of unladen tractor	1	$b$ [m]	Tractor wheelbase	1	3
$T_H$ [kg]	rear axle load of unladen tractor	1	$c$ [m]	distance from rear axle centre to centre of lower link balls	1	3
$G_H$ [kg]	combined weight of rear mounted implement/rear ballast	2	$d$ [m]	distance from centre of lower link balls to centre of gravity for combined rear mounted implement/rear ballast	2	3
$G_V$ [kg]	combined weight of front mounted implement/front ballast	2				

1 see instruction handbook of the tractor

2 see price list and/or instruction handbook of the implement

3 to be measured

#### Consideration of rear mounted implement and front/rear combinations

##### 1. CALCULATION OF MINIMUM BALLASTING AT THE FRONT $G_{V \min}$

$$G_{V \min} = \frac{G_H \cdot (c + d) - T_V \cdot b + 0,2 \cdot T_L \cdot b}{a + b}$$

Record the calculated minimum ballasting which is needed at the front of the tractor into the table.

#### Front mounted implement

##### 2. CALCULATION OF THE MINIMUM $G_{H \ min}$

Record the calculated minimum ballasting which is needed at the rear of the tractor into the table.

$$G_{H \ min} = \frac{G_V \cdot a - T_H \cdot b + 0,45 \cdot T_L \cdot b}{b + c + d}$$

### 3. CALCULATION OF THE REAL FRONT AXLE LOAD $T_{V \text{ tat}}$

(If with the front mounted implement ( $G_V$ ) the required minimum front ballasting ( $G_{V \text{ min}}$ ) cannot be reached, the weight of the front mounted implement has to be increased to the weight of the minimum ballasting at the front!)

$$T_{V \text{ tat}} = \frac{G_V \cdot (a + b) + T_V \cdot b - G_H \cdot (c + d)}{b}$$

Record the calculated real front axle load and the permissible front axle load of the tractor into the table.

### 4. CALCULATION OF THE REAL TOTAL WEIGHT $G_{\text{tat}}$

(If with the rear mounted implement ( $G_H$ ) the required minimum rear ballasting ( $G_{H \text{ min}}$ ) cannot be reached, the weight of the rear mounted implements has to be increased to at least the weight of the minimum ballasting at the rear!)

$$G_{\text{tat}} = G_V + T_L + G_H$$

Record the calculated real and the permissible total weight given in the instruction handbook for the tractor into the table.

### 5. CALCULATION OF THE REAL REAR AXLE LOAD $T_{H \text{ tat}}$

Record the calculated real and the permissible rear axle load given in the instruction handbook for the tractor into the table.

$$T_{H \text{ tat}} = G_{\text{tat}} - T_{V \text{ tat}}$$

### 6. TYRE LOAD CARRYING CAPACITY

Record double the value (two tyres) of the permissible load carrying capacity into the table (see for instance documentation provided by the tyre manufacturer).

**Table**

	Real value according to calculation	Permissible value according to instruction handbook	Double permissible tyre load carrying capacity (two tyres)
Minimum ballasting front/rear	/ kg	---	---
Total weight	kg	≤ kg	---
Front axle load	kg	≤ kg	≤ kg
Rear axle load	kg	≤ kg	≤ kg

**The minimum ballasting has to be attached to the tractor either in form of a mounted implement or ballasting weight!**

**The calculated values must be less or equal (<) the permissible values!**

**D** Im Zuge der technischen Weiterentwicklung arbeitet die PÖTTINGER Ges.m.b.H ständig an der Verbesserung ihrer Produkte.
